

# Diseases of Lymph nodes and spleen

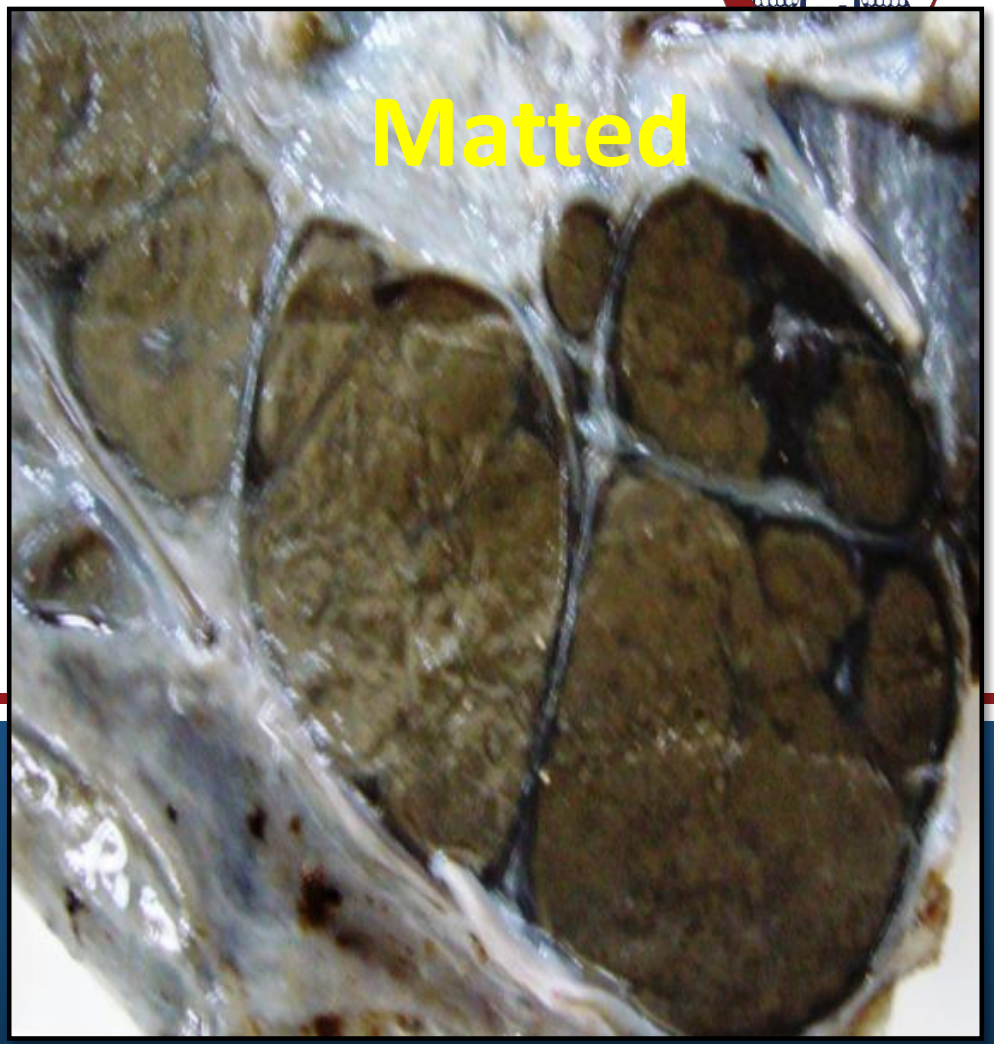

# ILOs By the end of this lesson you will be able

To identify & Describe the gross features of:

1. Tuberculous Lymphadenitis.
2. Primary Glandular Complex
3. Tables Mesenterica.
4. Tables Mesenterica& dystrophic calcification .
5. Hodgkin's Lymphoma.
6. Recent Infarction  Spleen
7. Congestive splenomegaly
8. Hydatid cyst of spleen.
9. Miliary Tuberculosis of spleen
10. Multiple Tuberculomata of spleen
11. Chronic Myeloid Leukaemia

# Tuberculous Lymphadenitis

# Tuberculous Lymphadenitis

Yellow white (caseation)

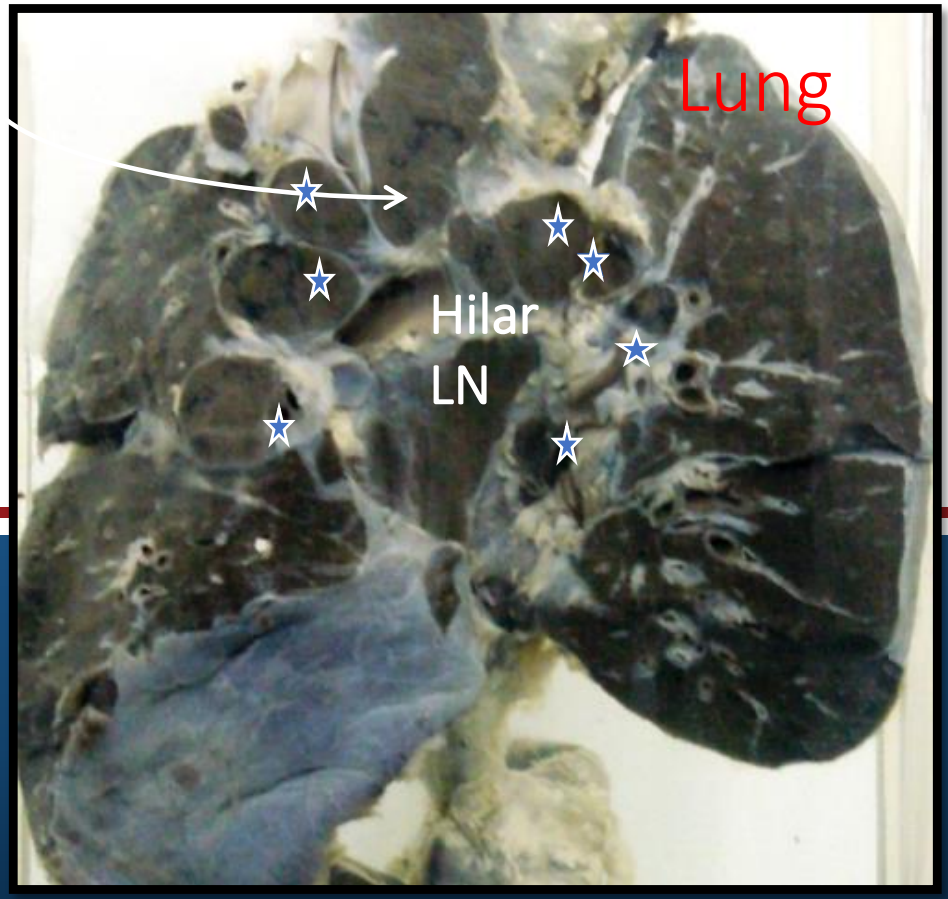

## Group of LNs

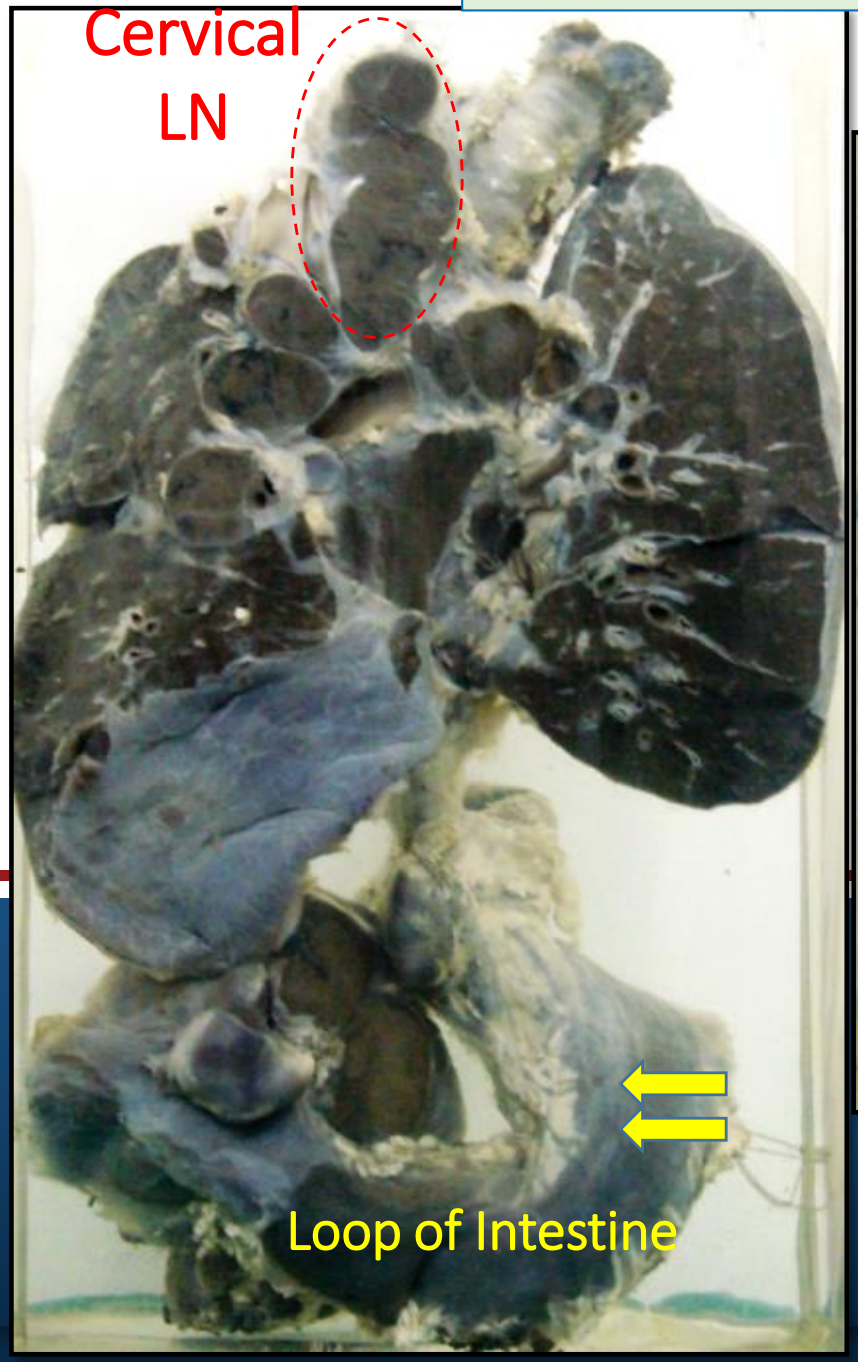

- Enlarged
- 0.5- 3 cm
- Matted
- Yellow white (caseation)

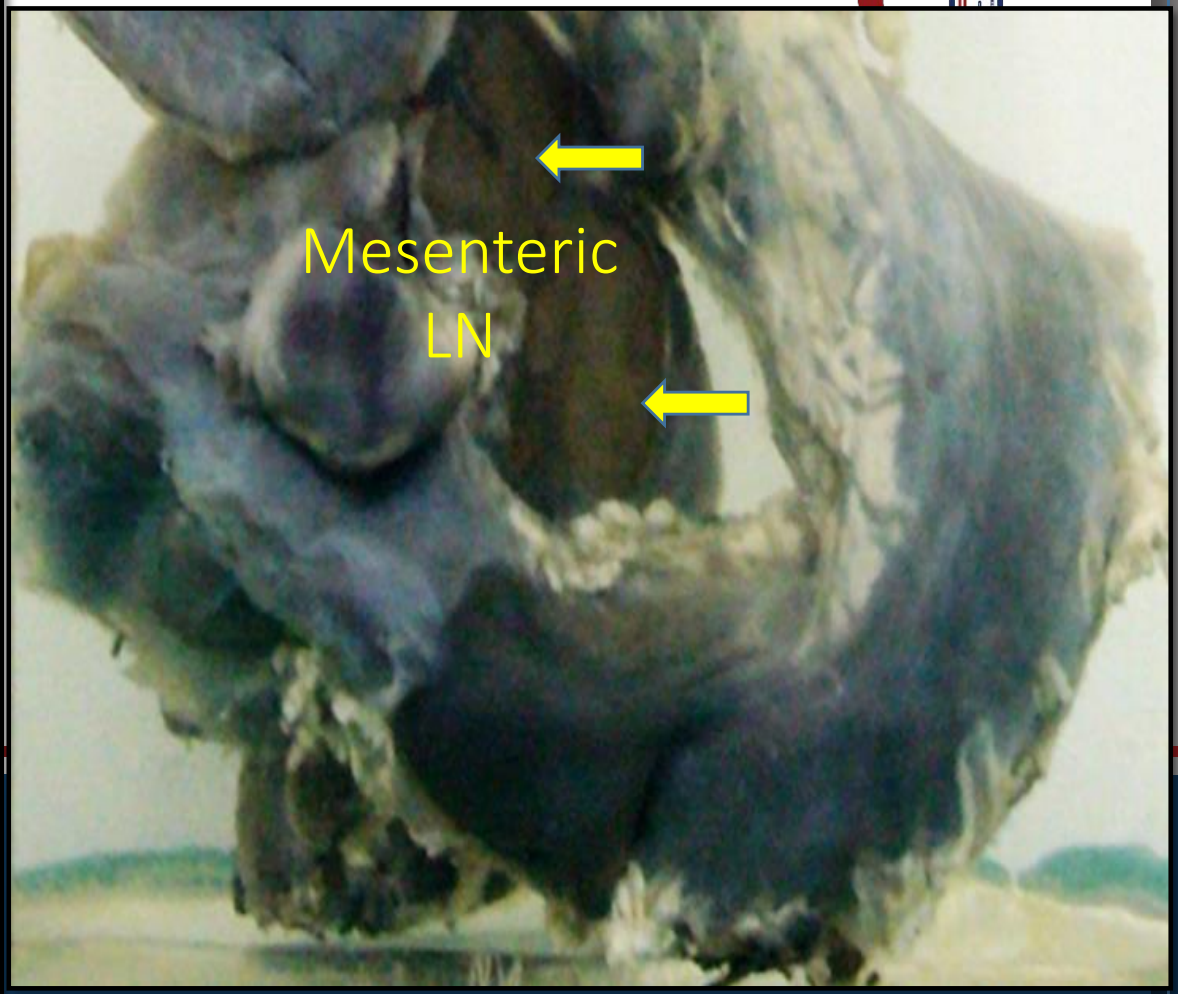

# Primary Glandular Complex

# Primary Glandular Complex

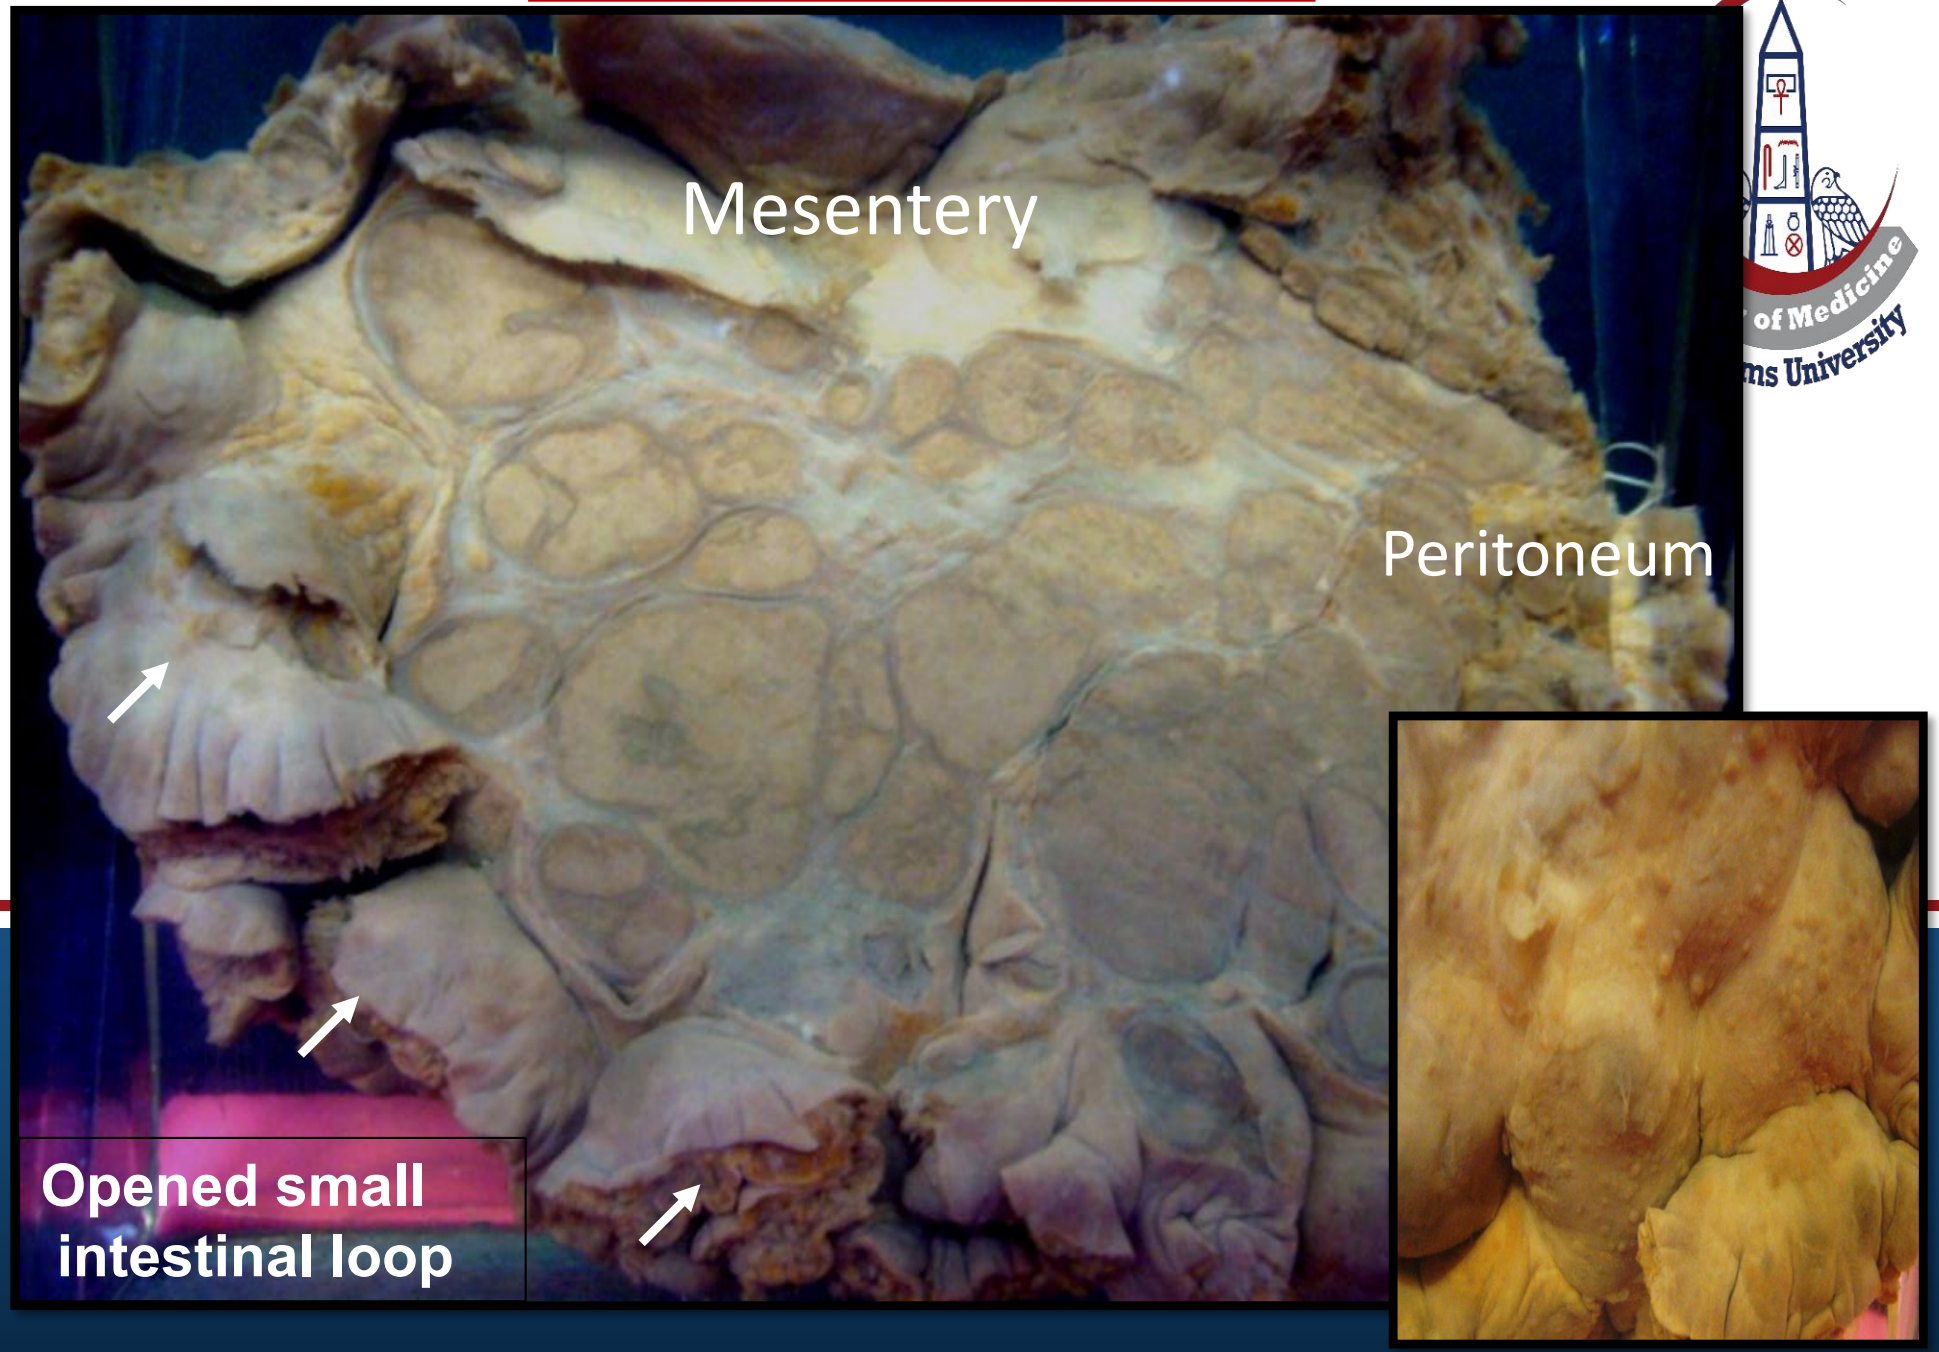

# Primary Glandular complex

**Cervical, hilar & mesenteric LNs**

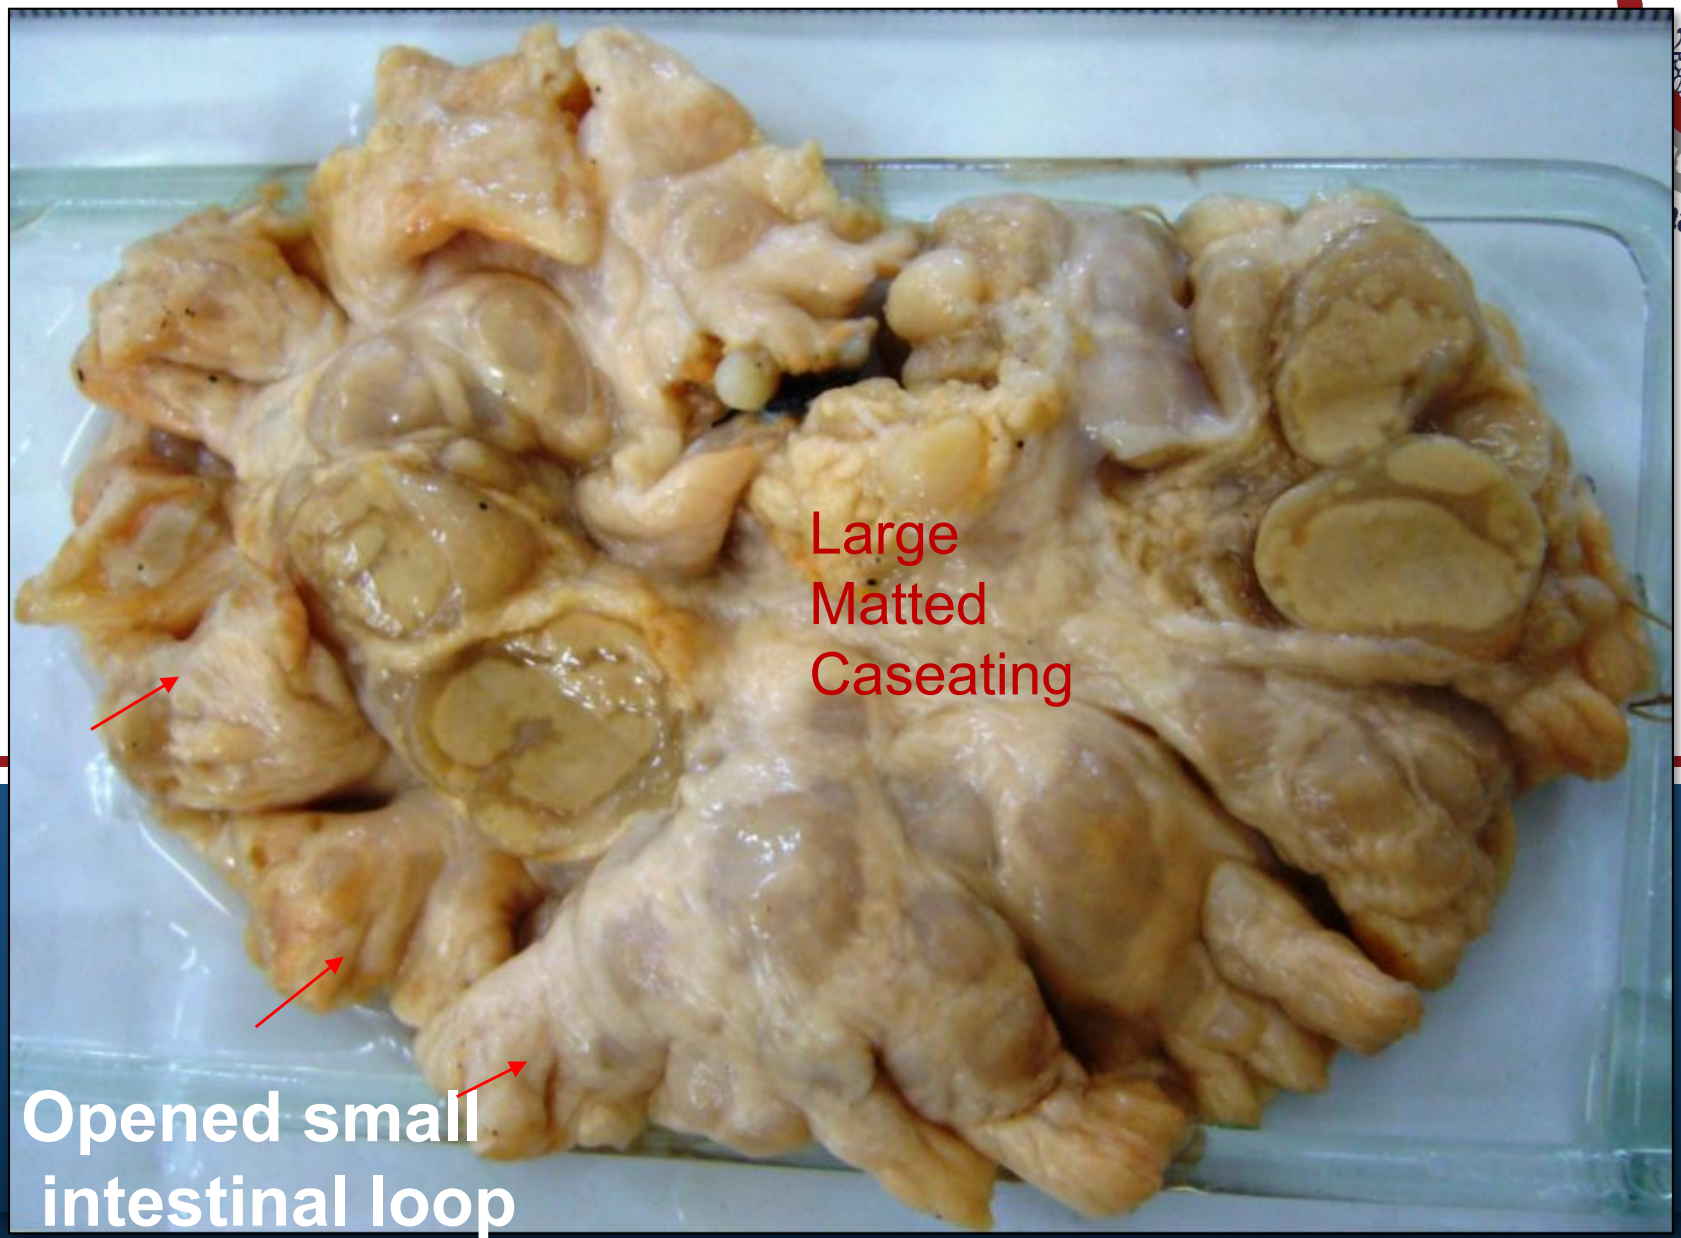

- Enlarged
- 0.5-3 cm
- Matted
- Yellow white (caseation)

# Tables Mesenterica

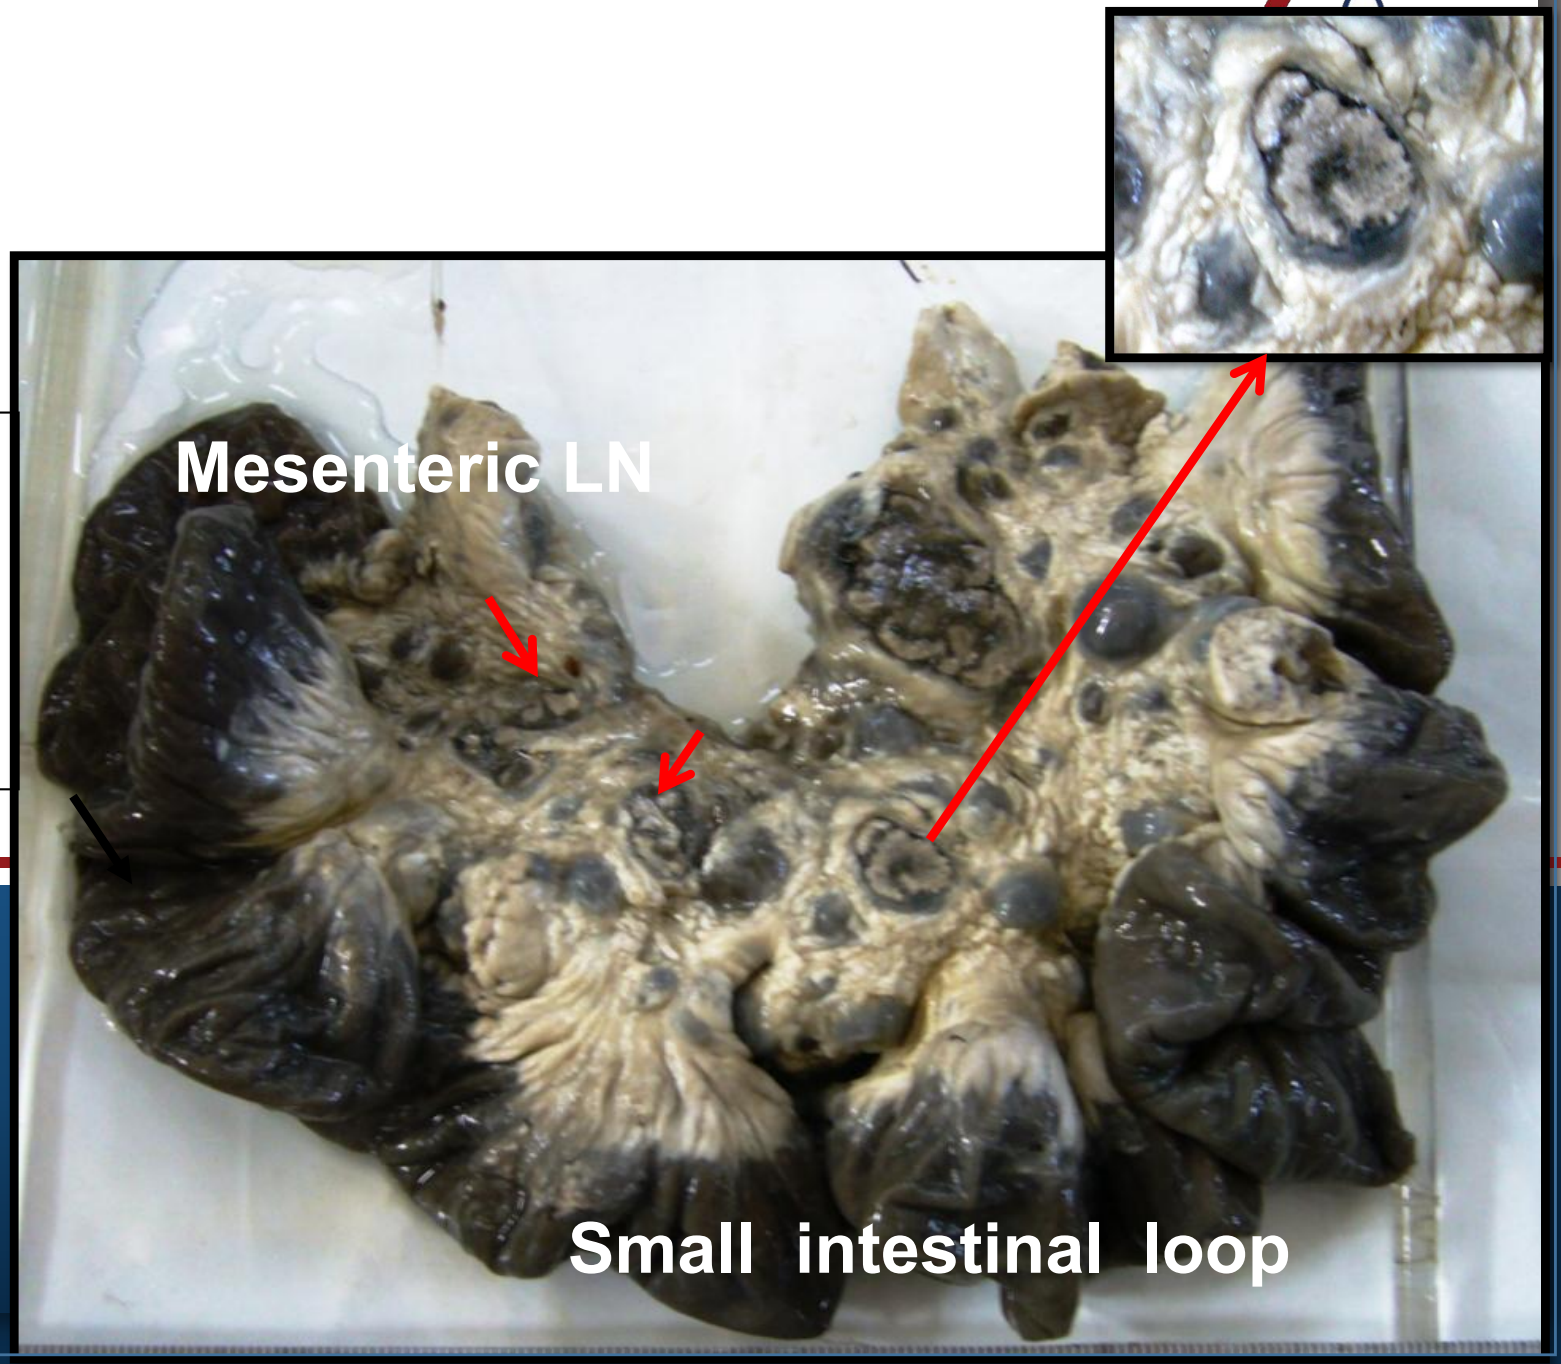

# Tables Mesenterica

# Tabes Mesenterica & dystrophic calcification.

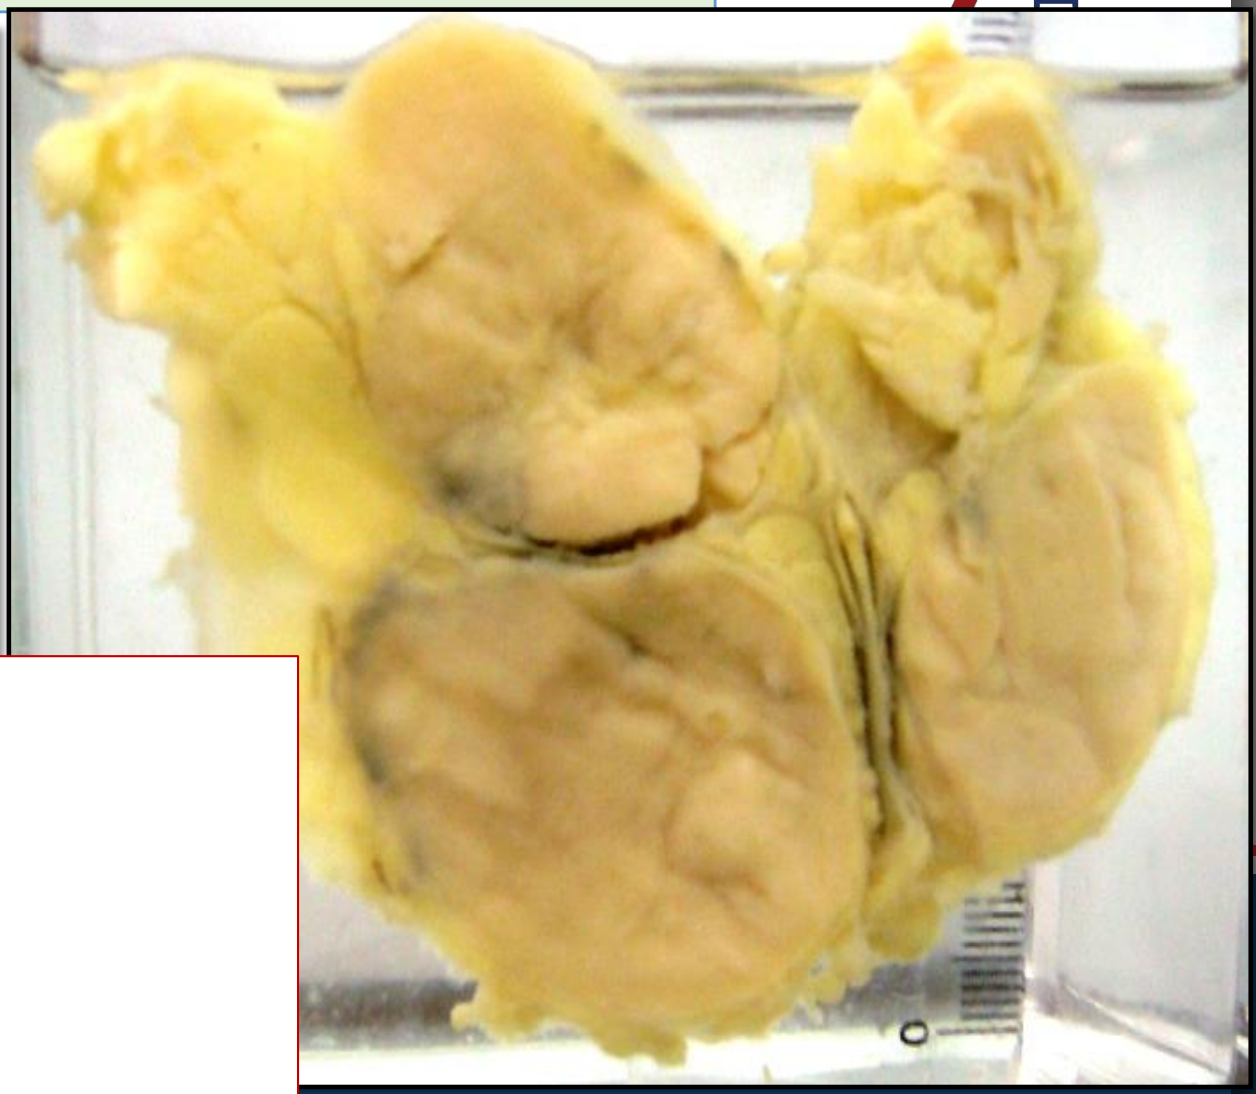

- Large
- Matted
- Caseation

+ Chalky White Calcification

# Hodgkin's Lymphoma

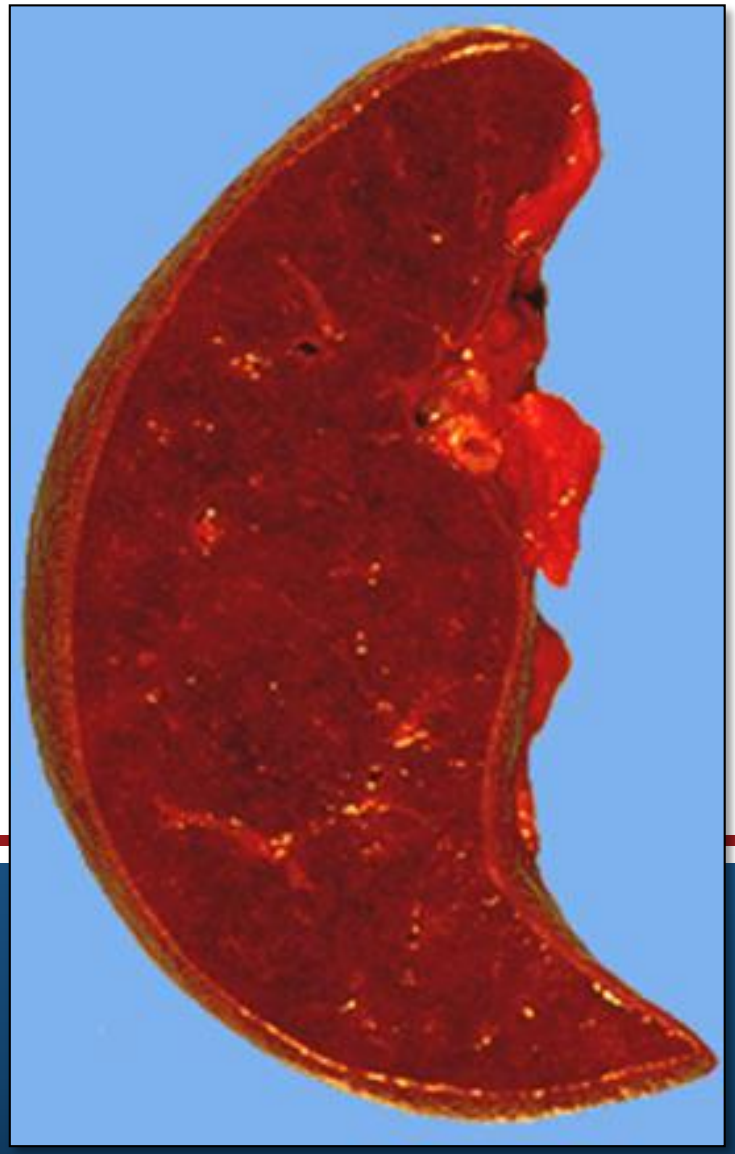

- Enlarged (1-5cm)
- Oval
- Discrete (i.e. separate)
- Cut surface:
  - Homogenous
  - Pink
  - Rubbery

# Hodgkin's Lymphoma

- Enlarged (1-5cm)
- Oval
- Discrete (i.e. separate)
- Cut surface:
  - Homogenous
  - *Pink*
  - Rubbery

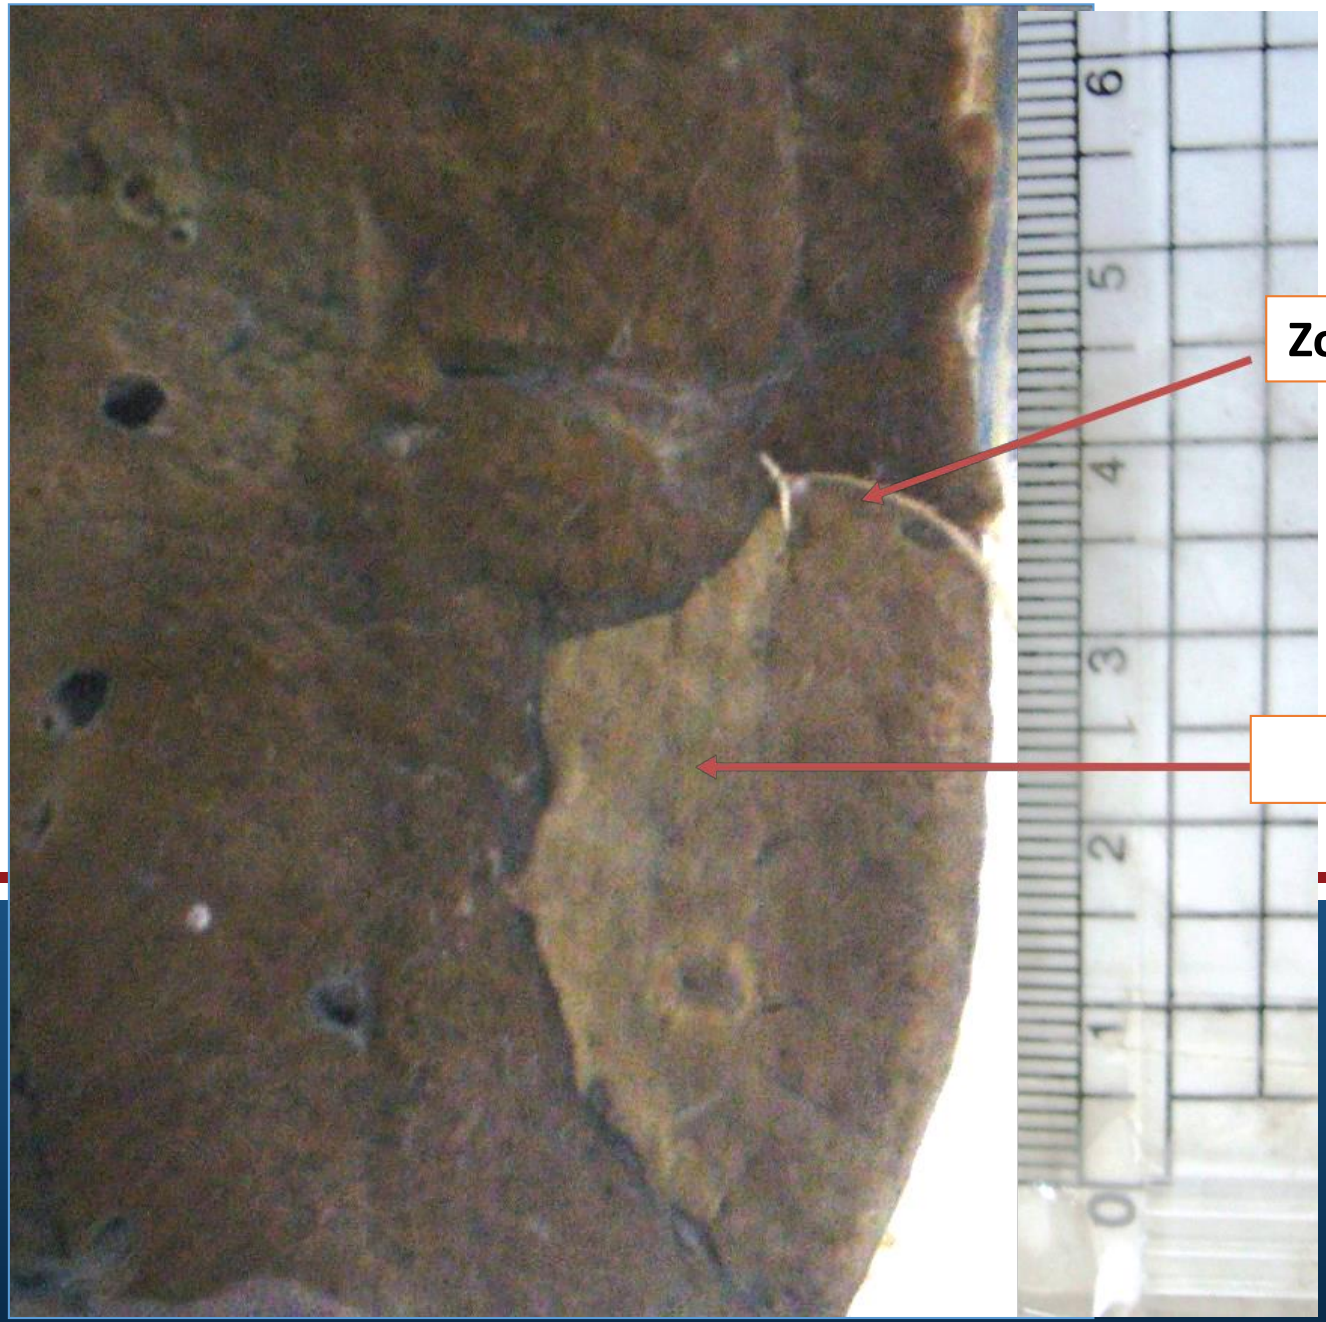

-3a

# Recent Infarction of the Spleen.

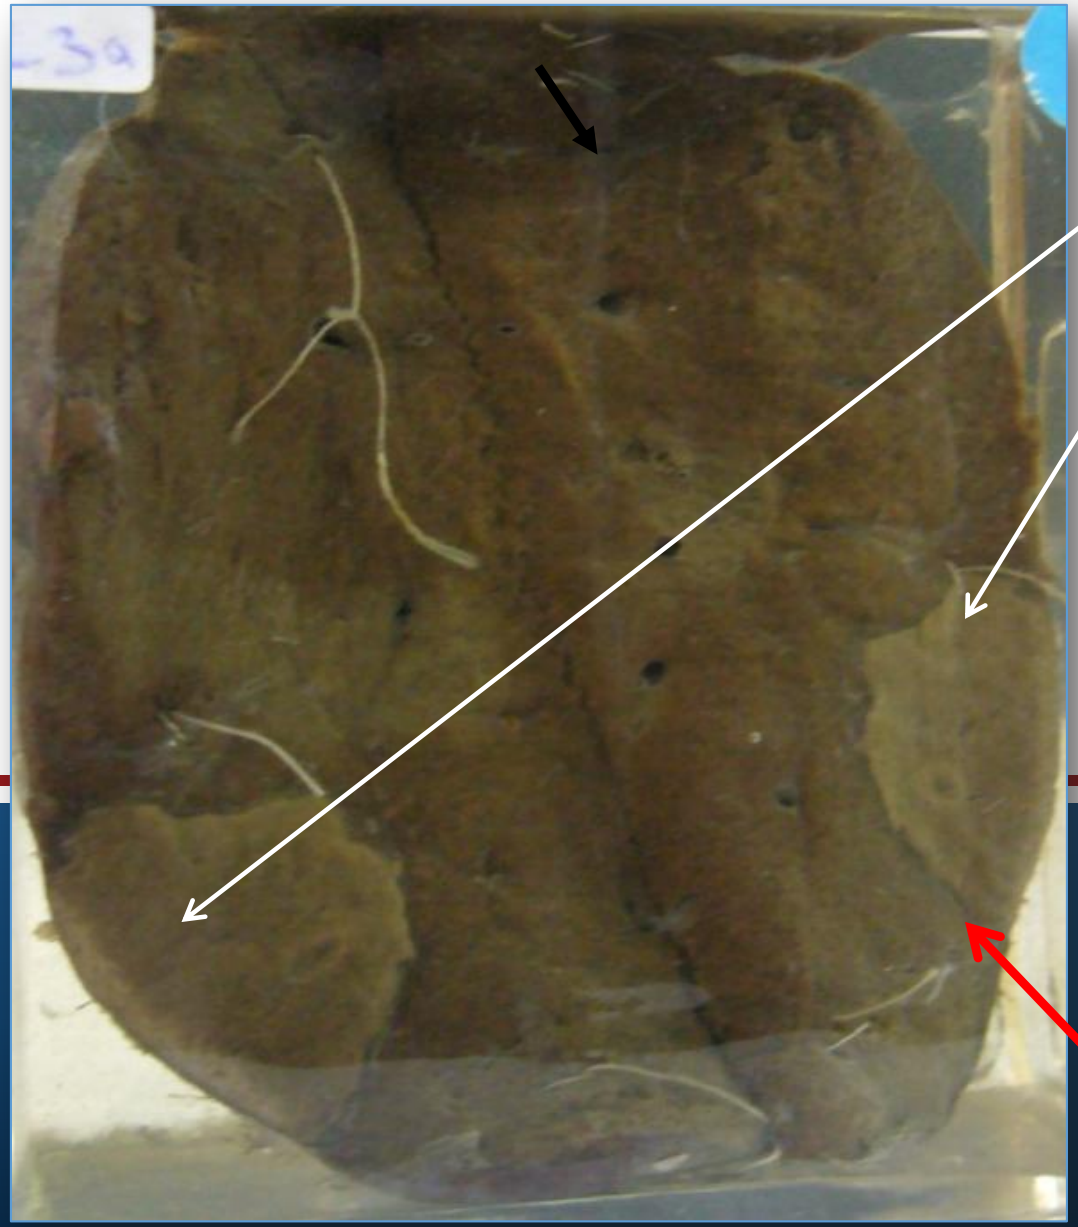

Area of infarction
Triangular
Apex –hilum
Base--capsule
Pale yellow
Solid
Zone of hyperemia

# Recent Infarction of the Spleen.

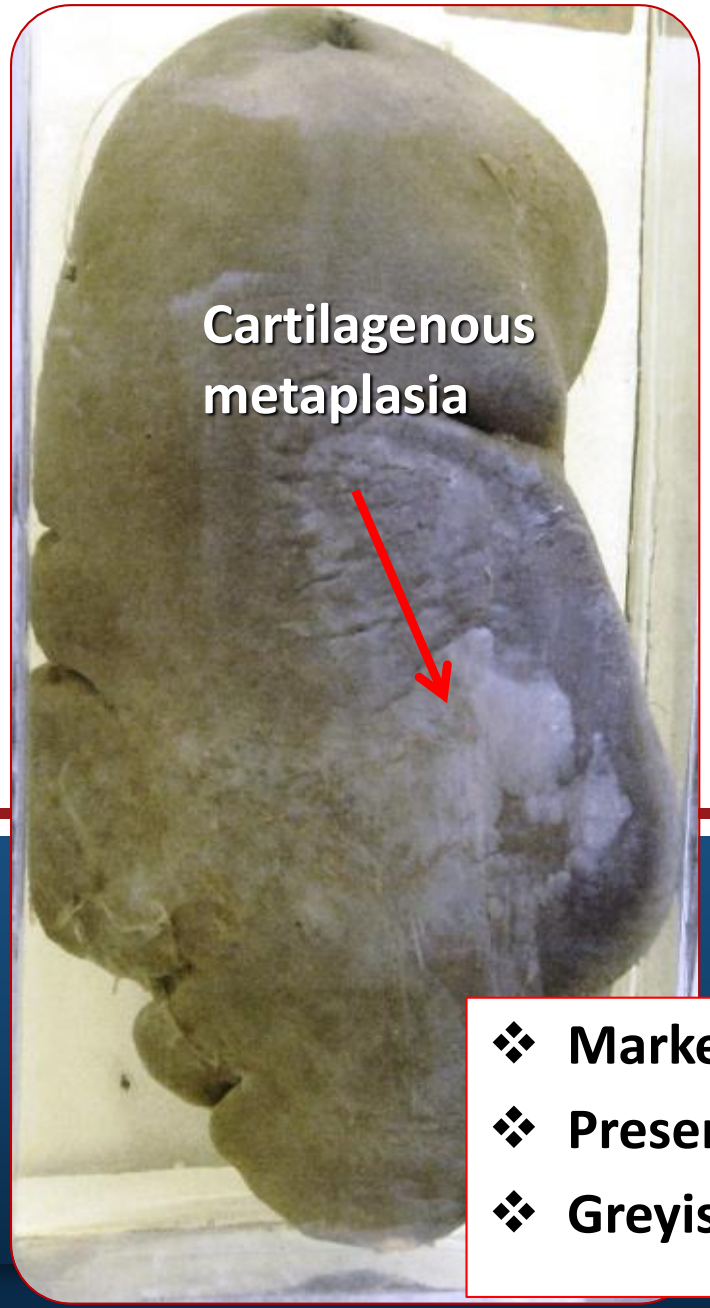

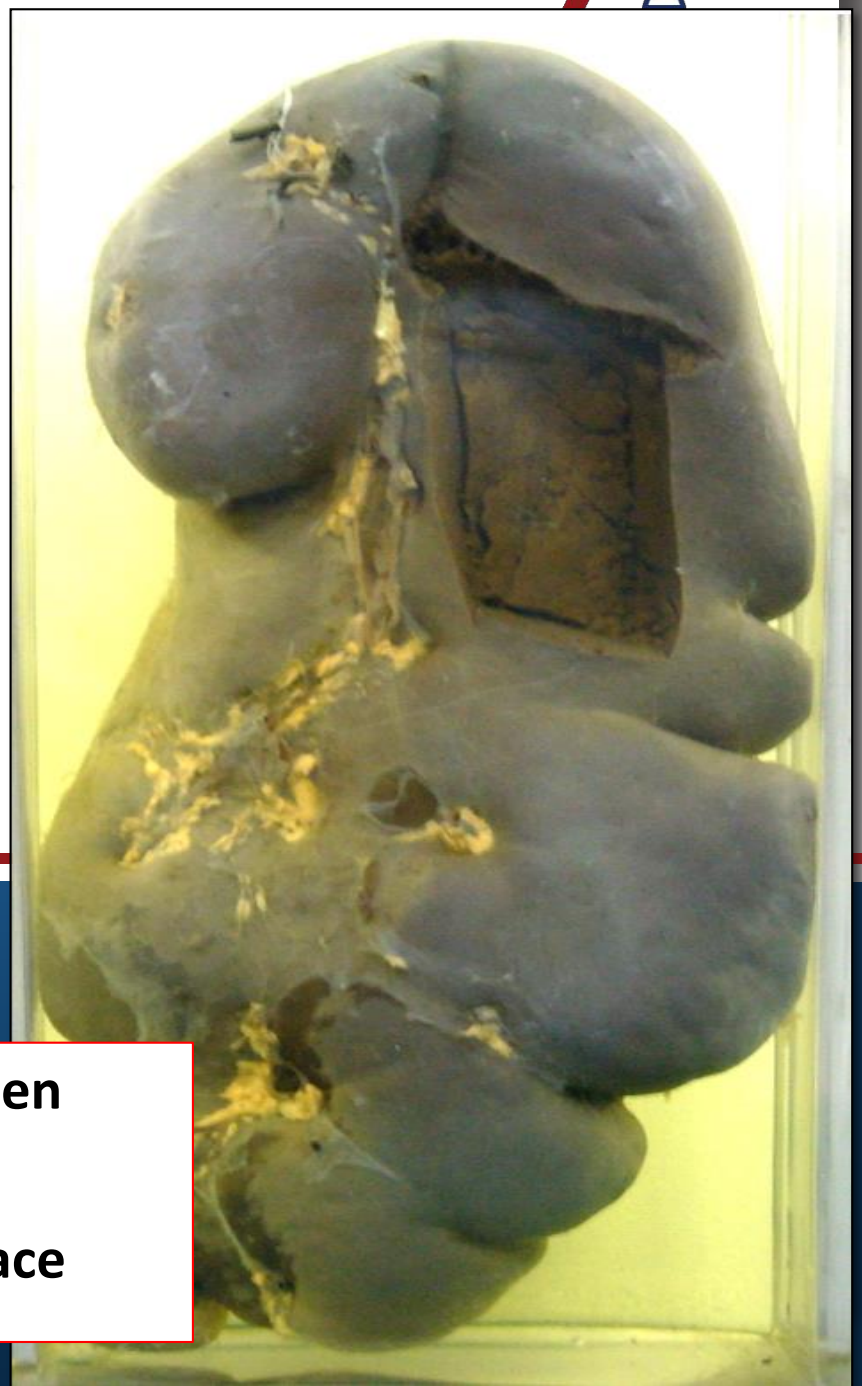

# Recent Infarction of the Spleen.

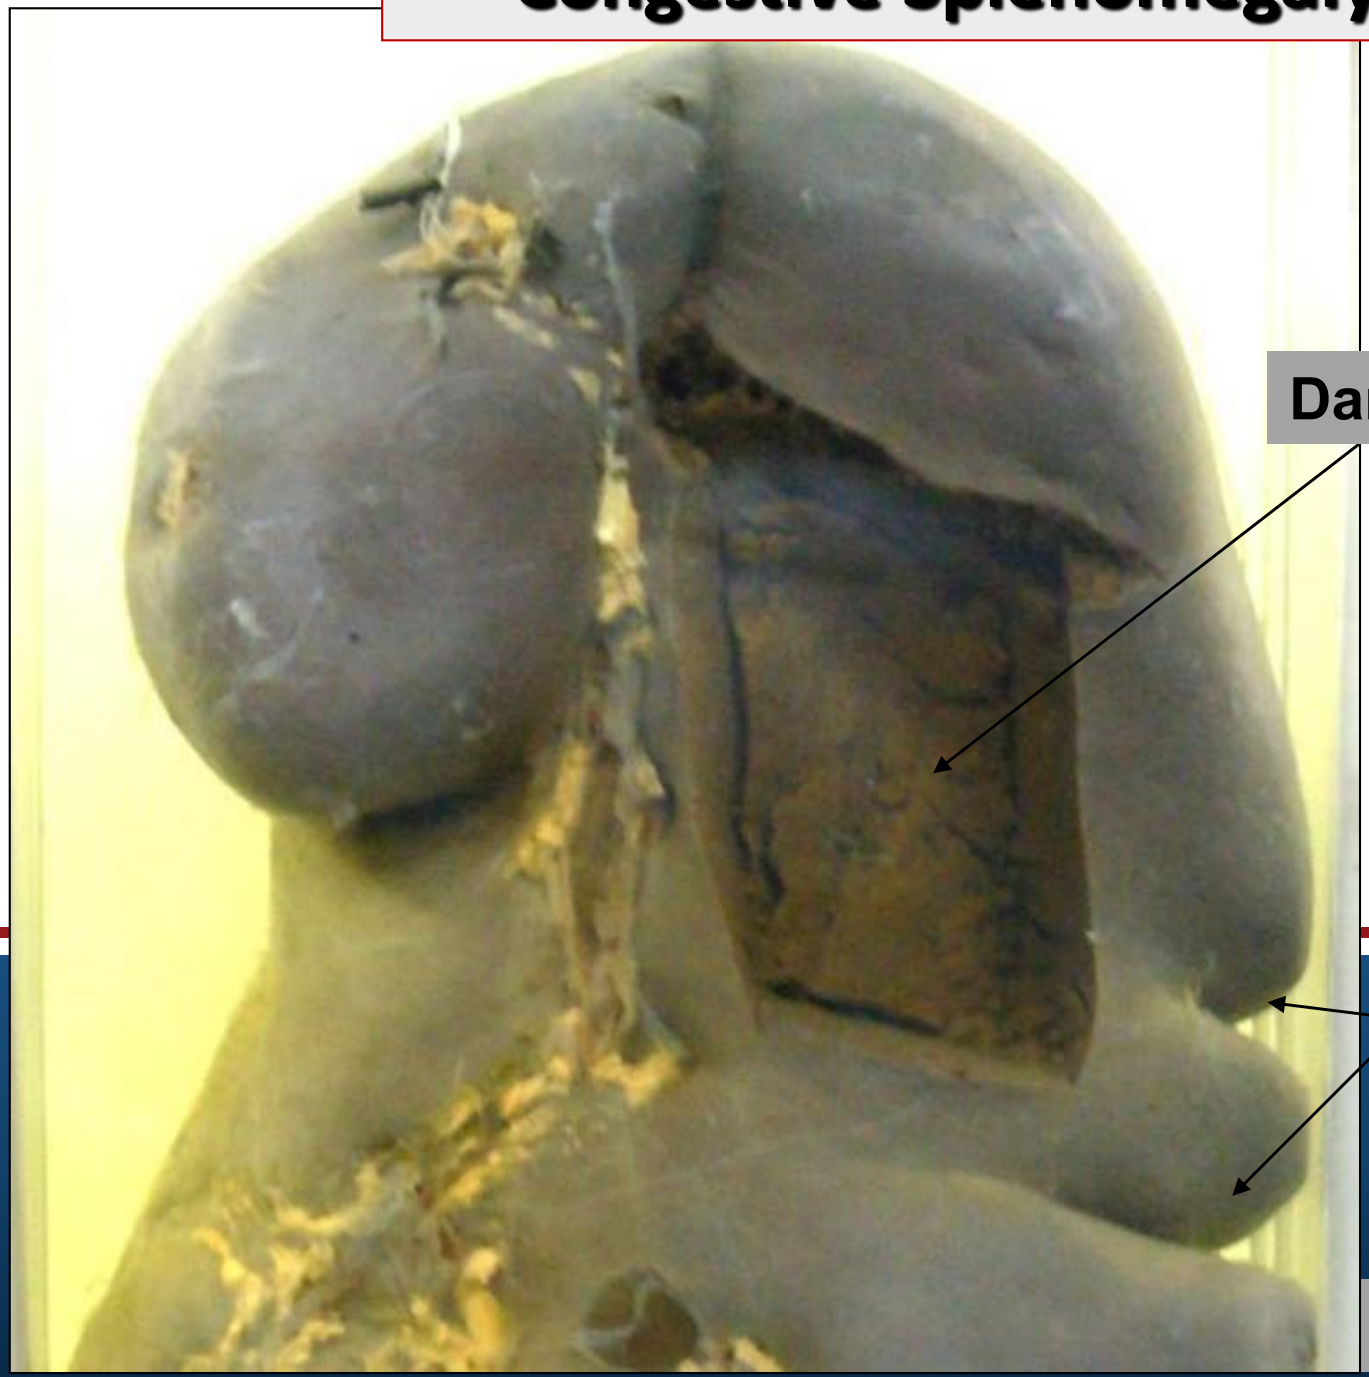

# Chronic Venous Congestion of the Spleen:

- Markedly enlarged spleen
- Preserved notches
- Greyish brown cut surface

# Congestive Splenomegaly

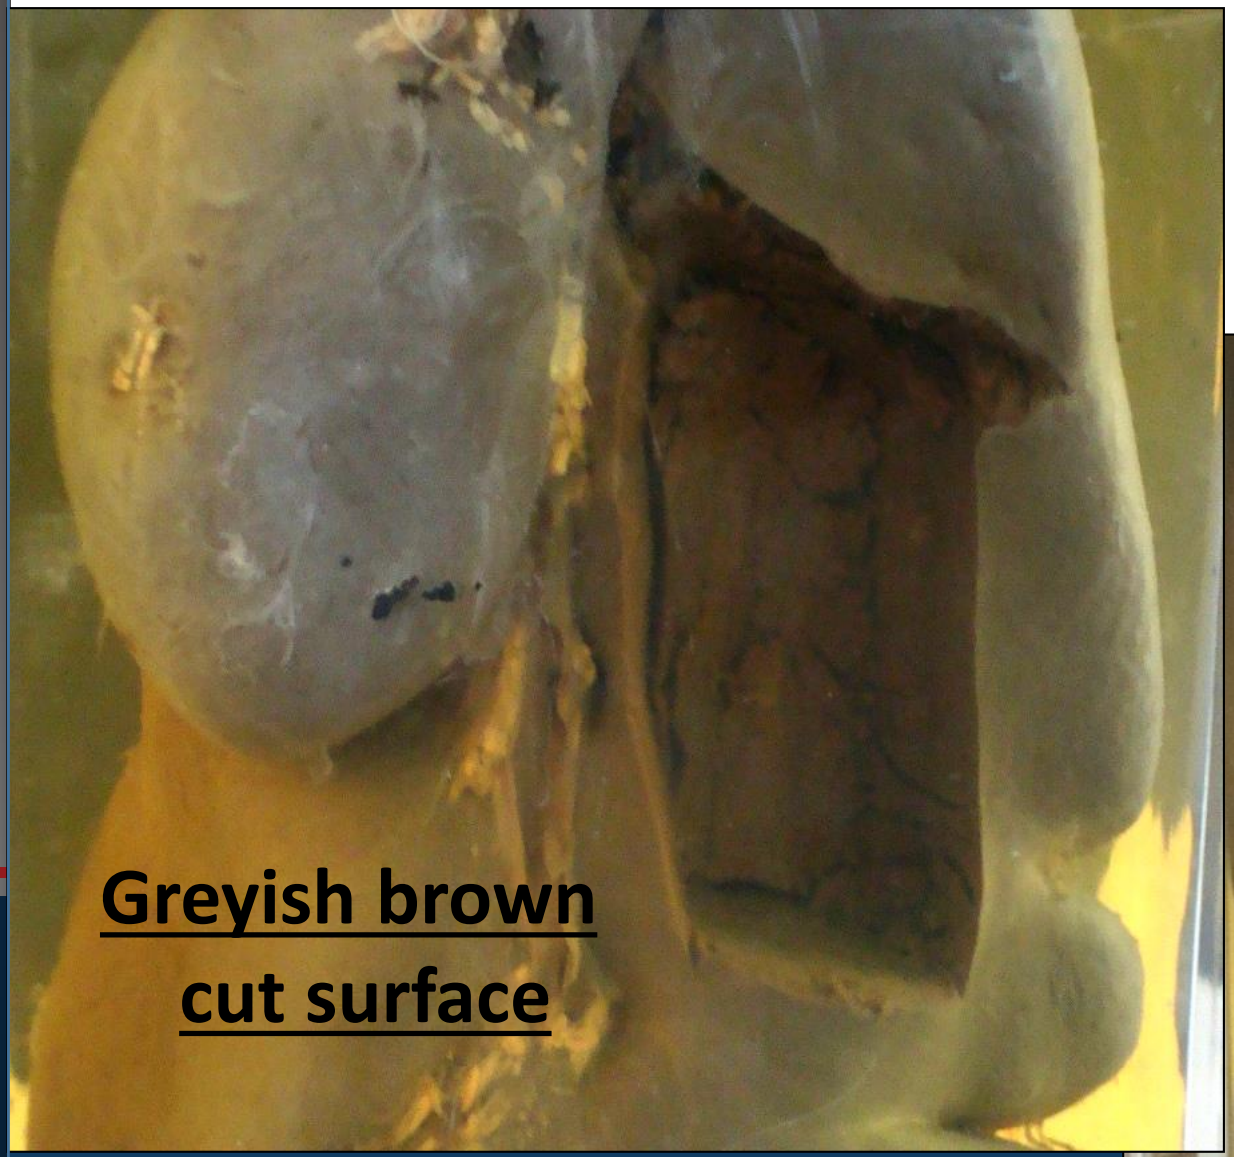

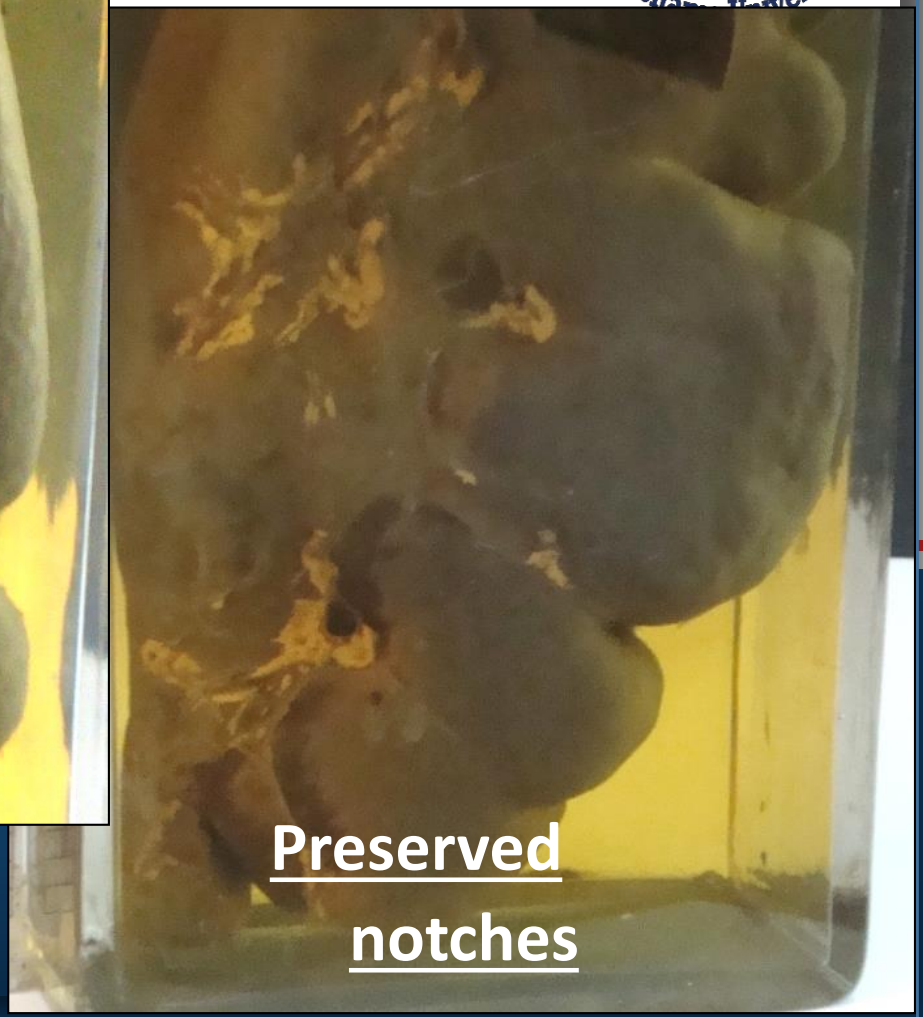

Dark brown cut surface

Preserved notches

Thickened capsule

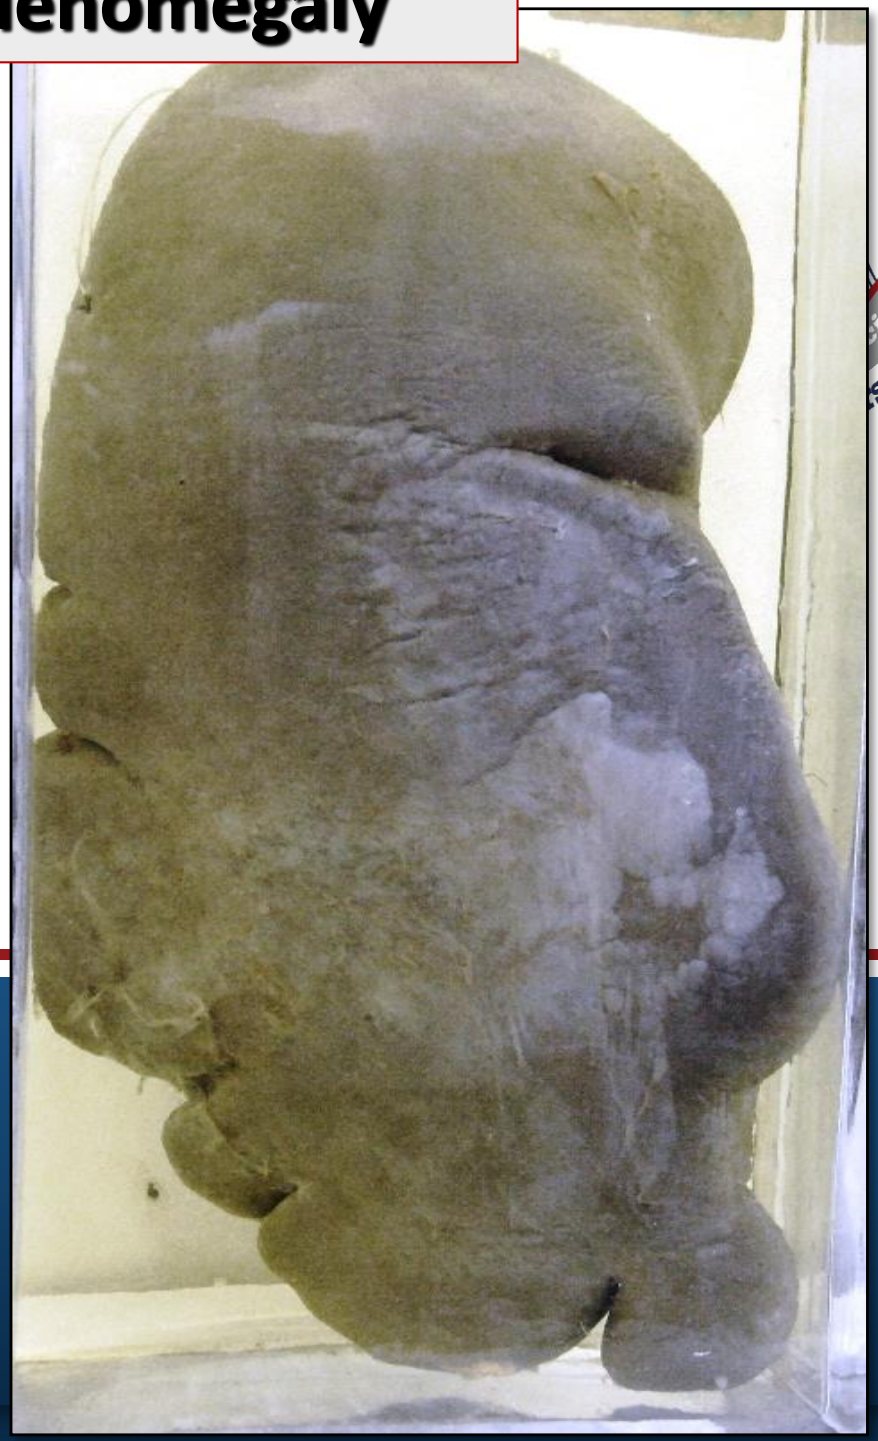

# Congestive Splenomegaly

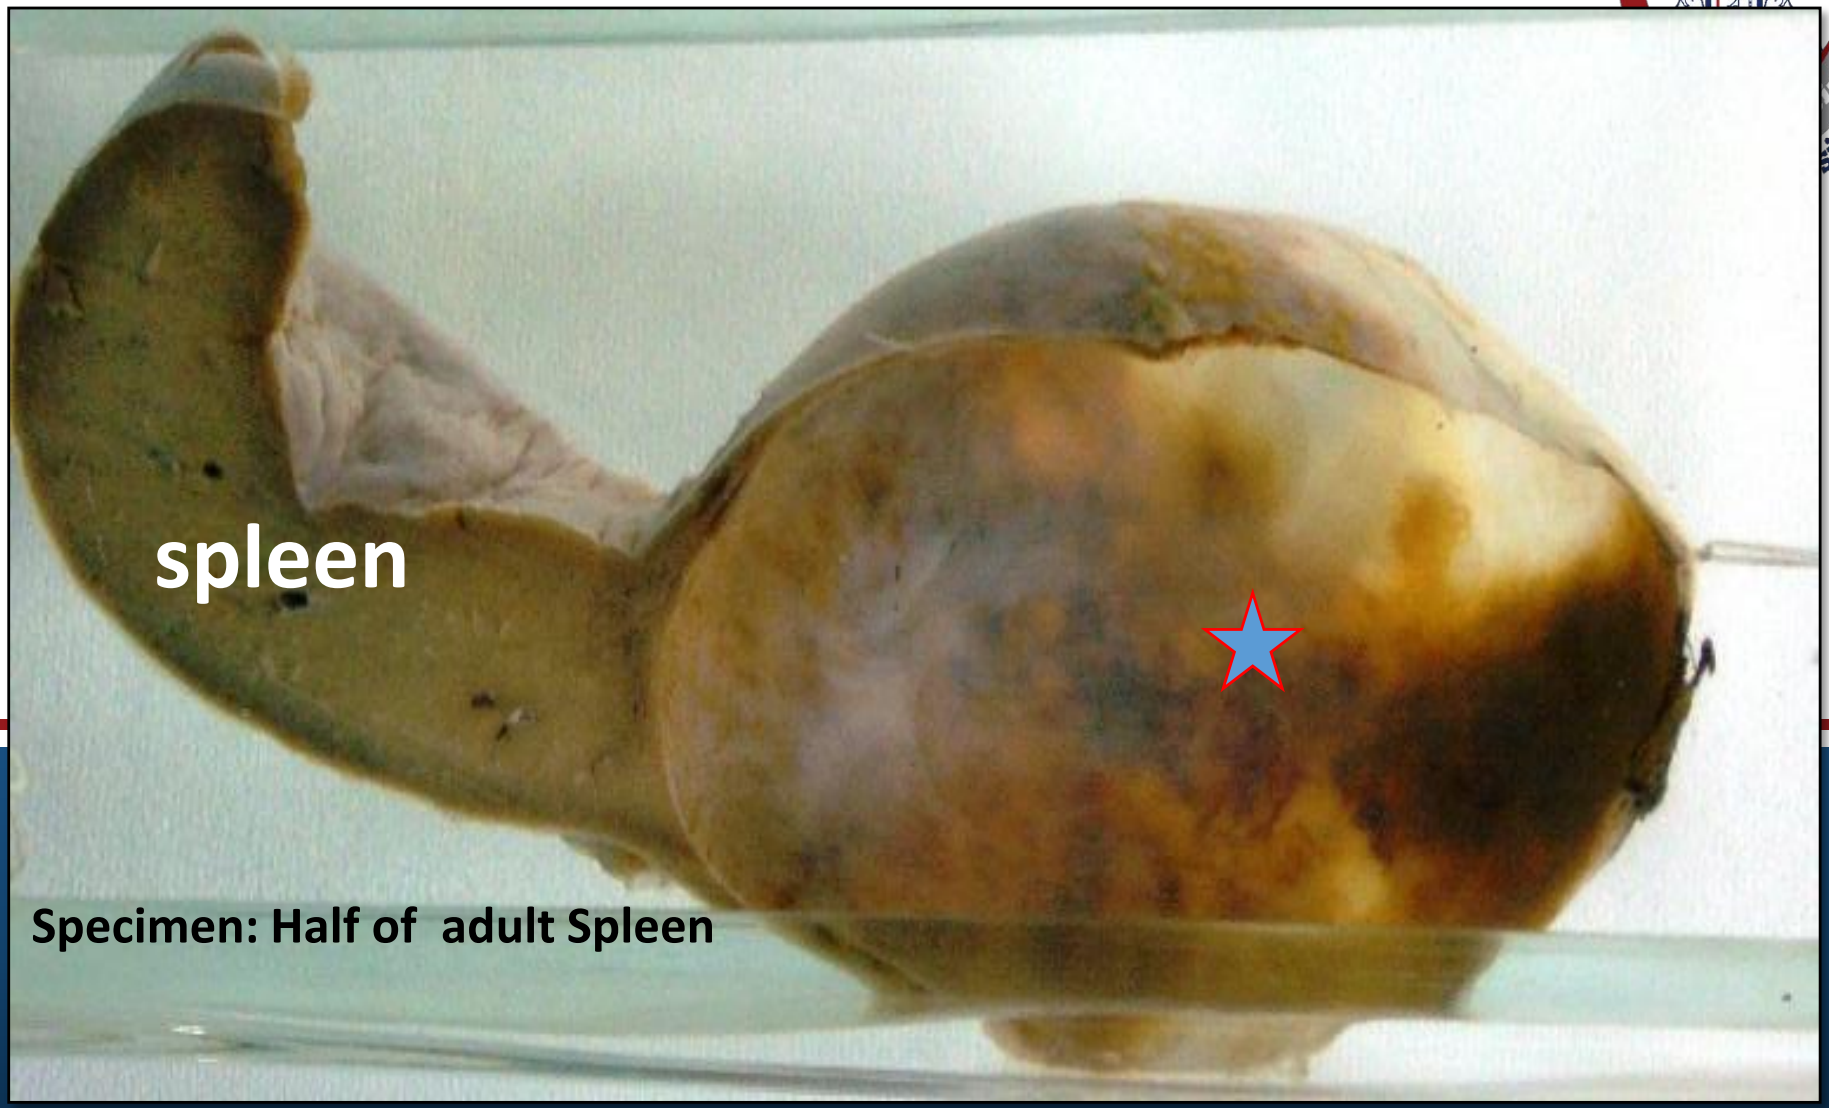

# Congestive Splenomegaly

- Thickened opaque fibrosed capsule
- Translucent cartilaginous metaplasia

# Hydatid Cyst Of Spleen

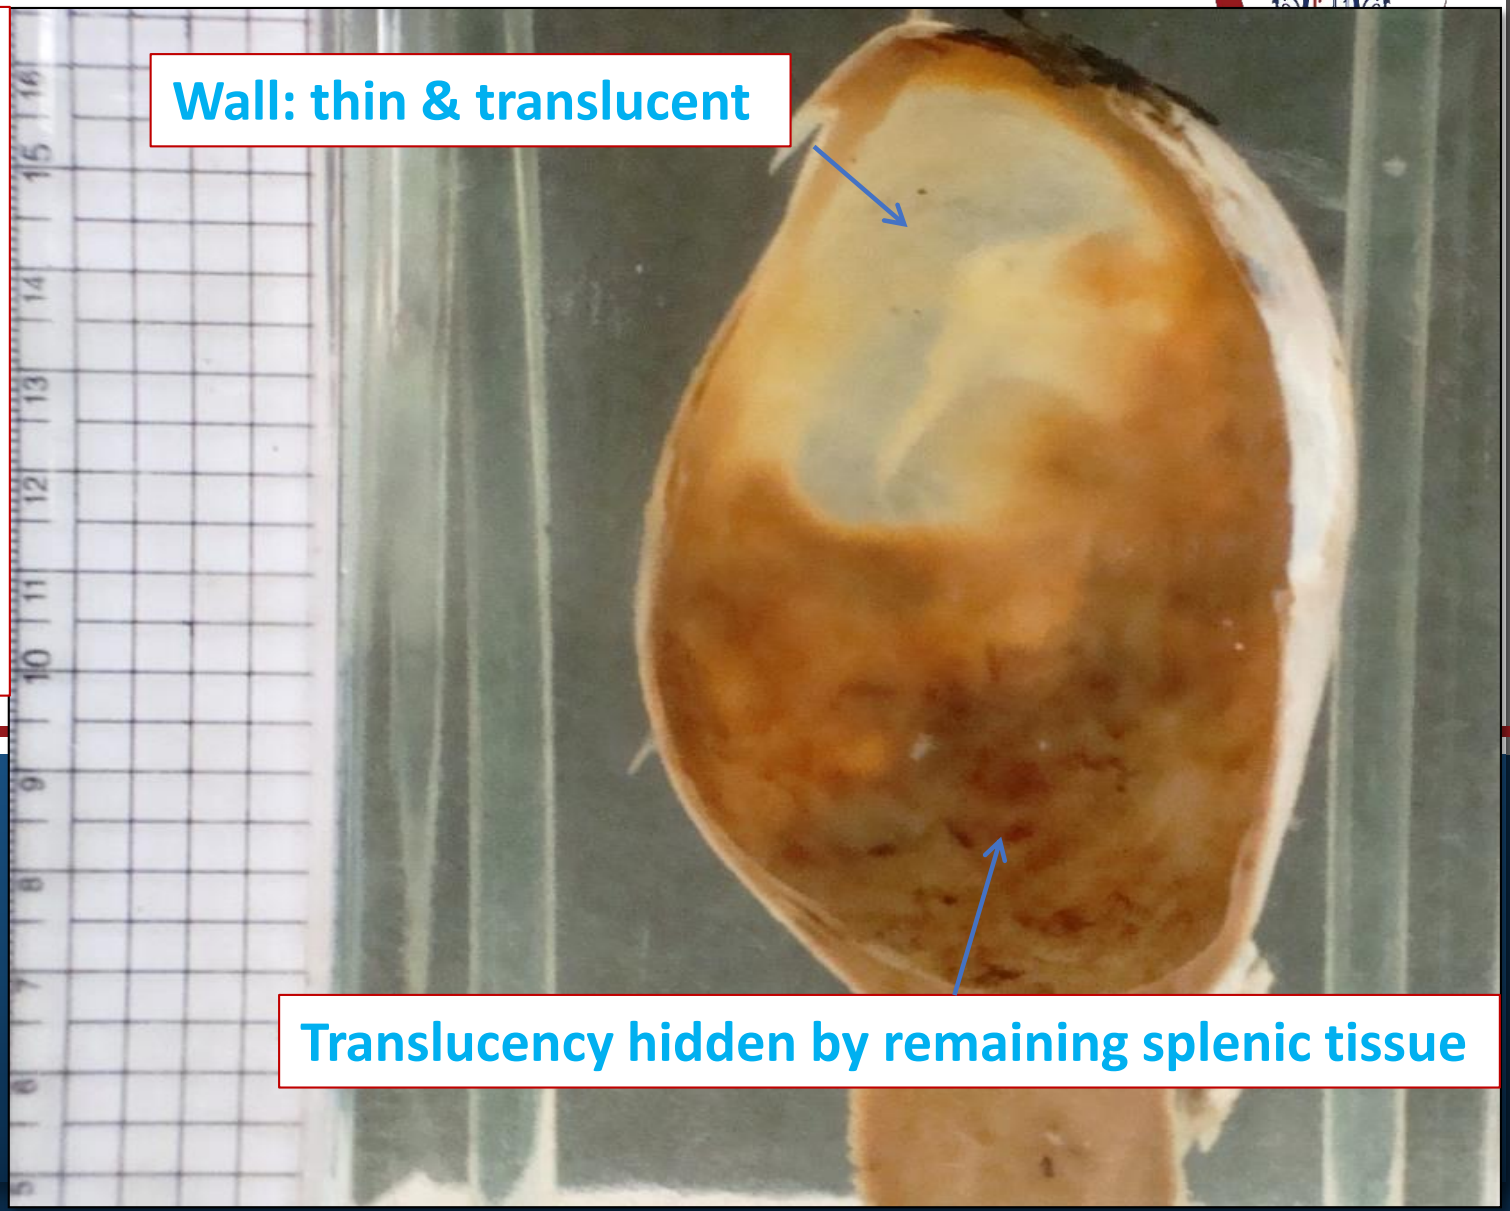

Specimen: Half of adult Spleen

# Hydatid Cyst Of Spleen

**Cyst**

- Single
- Oval
- 9x6cm
- One pole
- Wall: thin & translucent

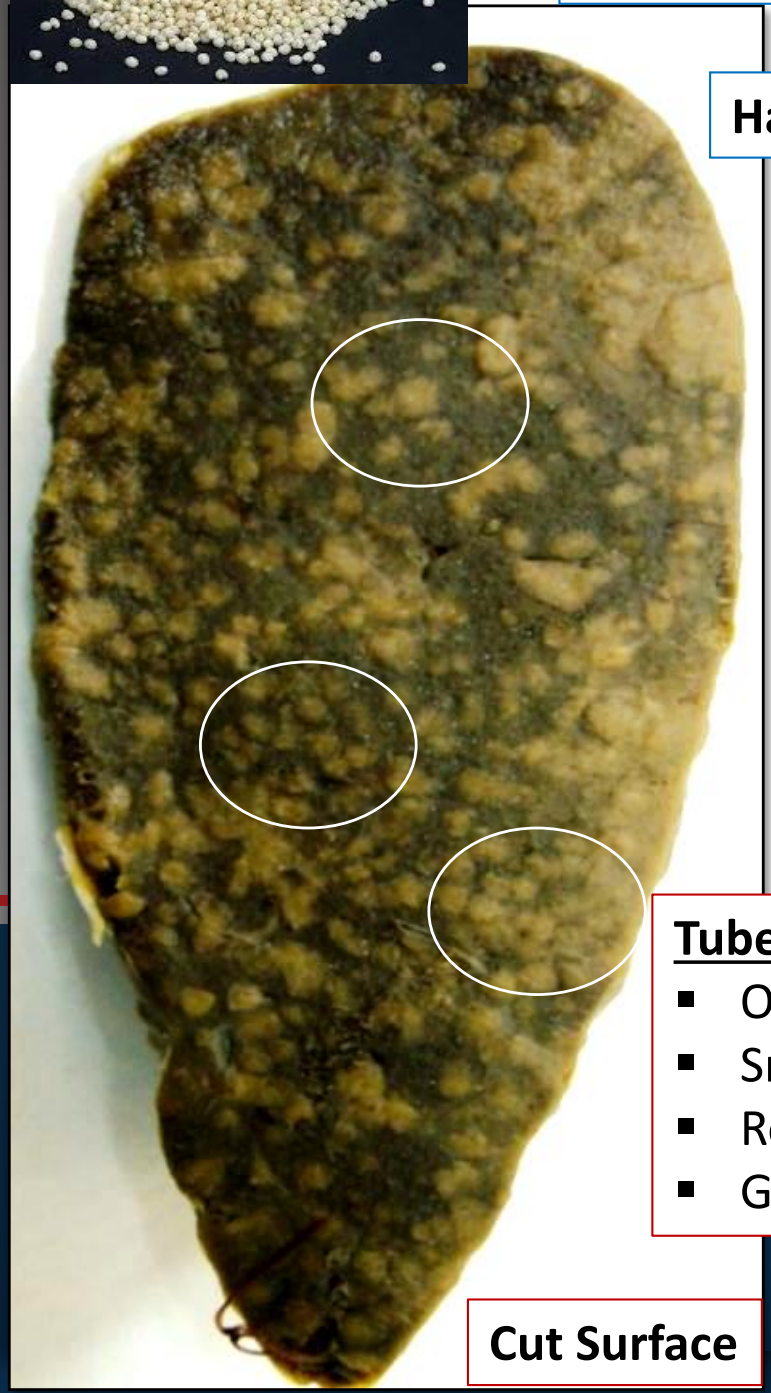

# Tuberculosis of the Spleen

- **Miliary Tuberculosis**
- **Multiple Tuberculomata**

# Miliary Tuberculosis of spleen

Half of child spleen(small)

Cut Surface

**Tubercles**

- On outer & cut surface
- Small
- Rounded
- Greyish white

outer surface

# Multiple Tuberculomata of the Spleen

Cut Surface

**Patches of Tuberculous reaction**

- On outer & cut surface
- Variable size (0.5-2 cm)
- Variable shape

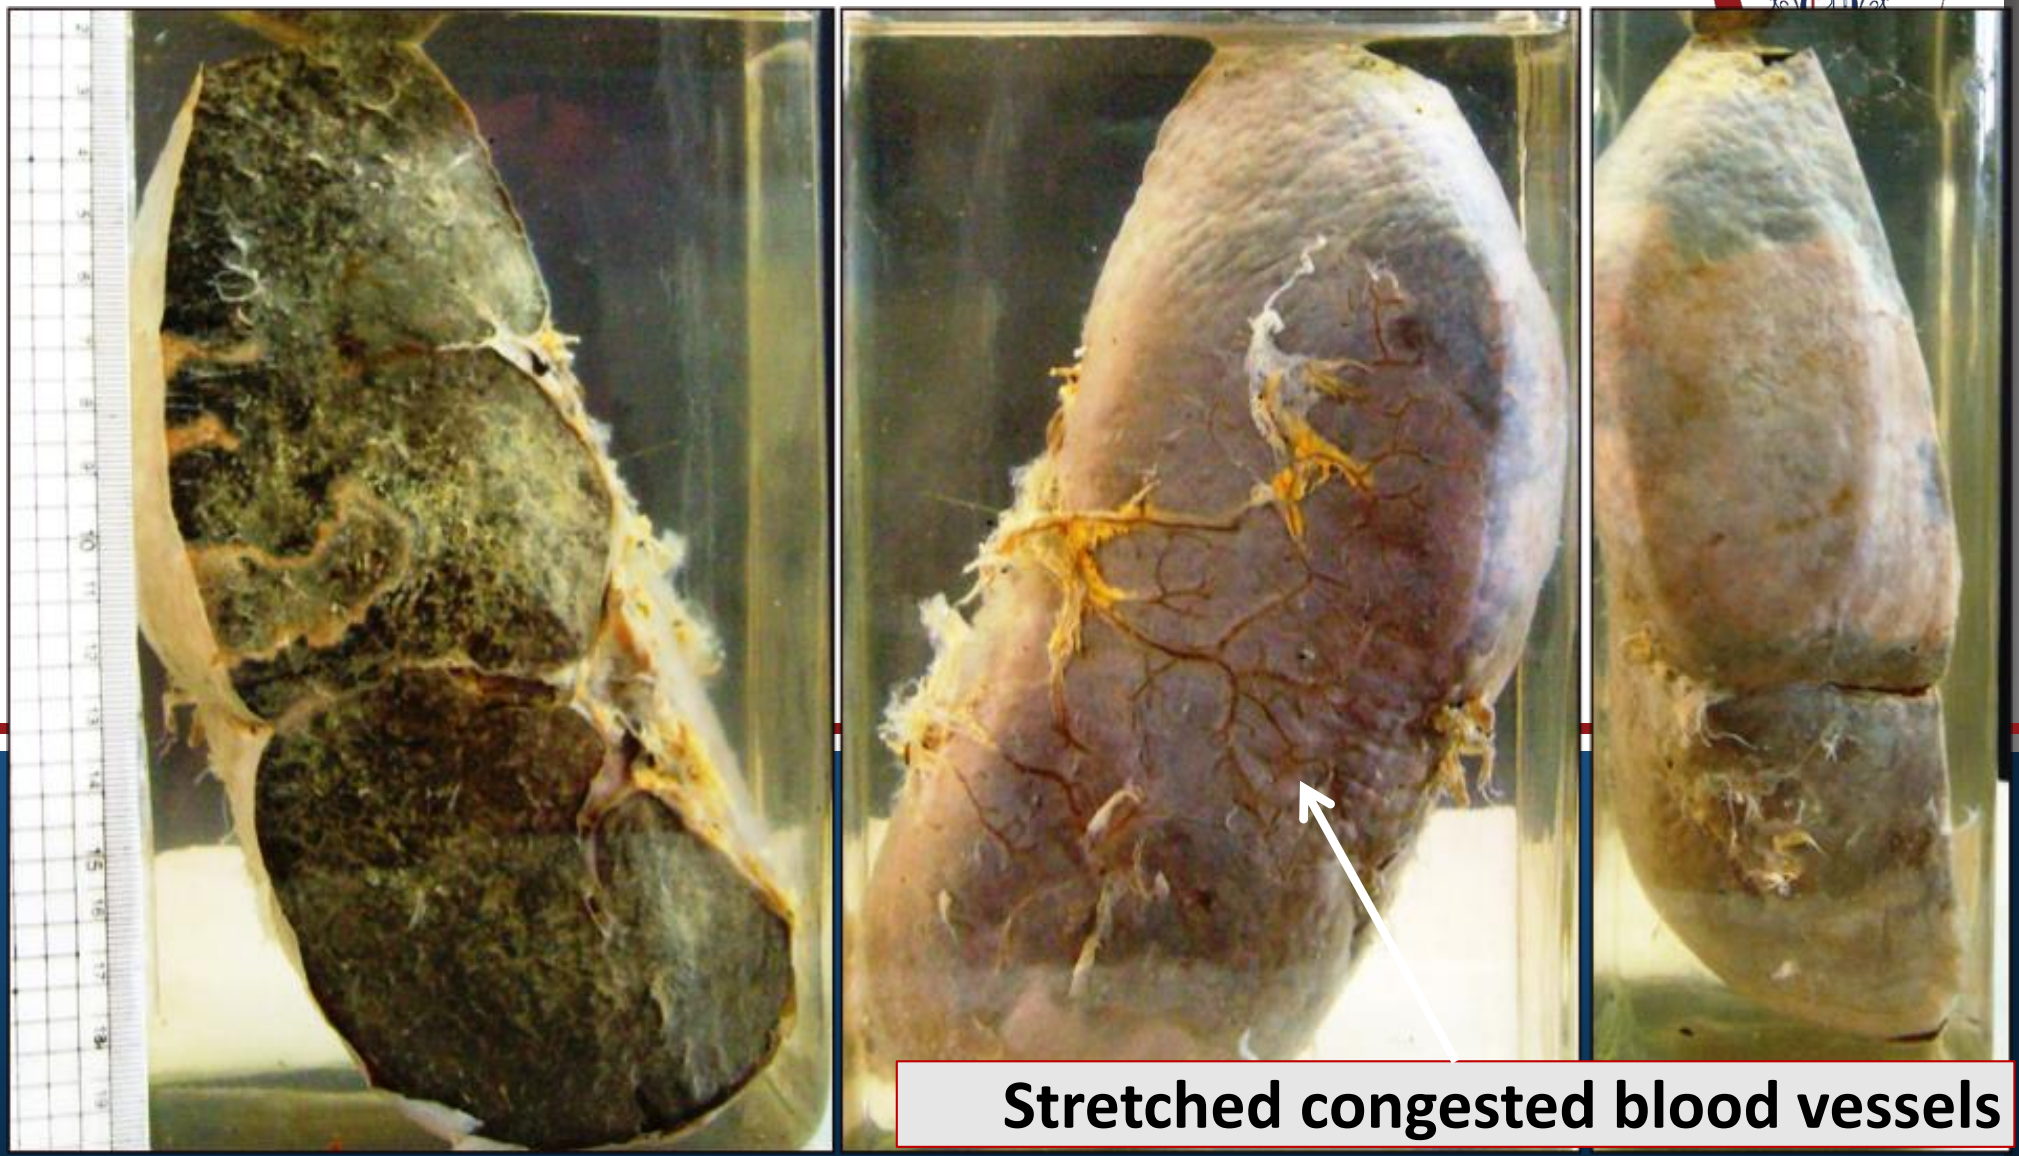

Outer surface

# Multiple Tuberculomata of the Spleen

Cut Surface

# Chronic Myeloid Leukaemia

# Chronic Myeloid Leukaemia

- **Enlarged**
- **Lost splenic notch**
- **Sharp borders**
- **Outer surface:**

  **Smooth, Stretched congested blood vessels**
- **Cut surface :**

  **Greyish, Areas of infarction ( as before)**

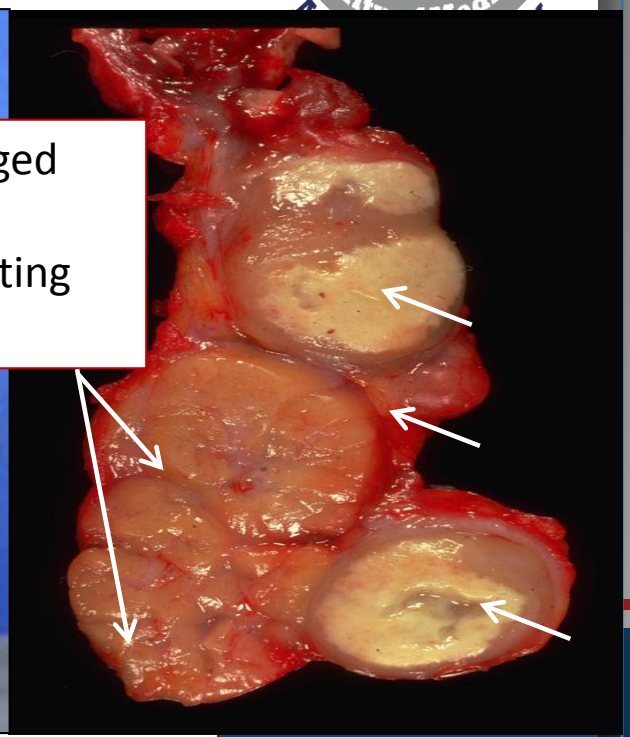

# Demonstration

# Tuberculous Lymphadenitis

Enlarged Non caseating LN

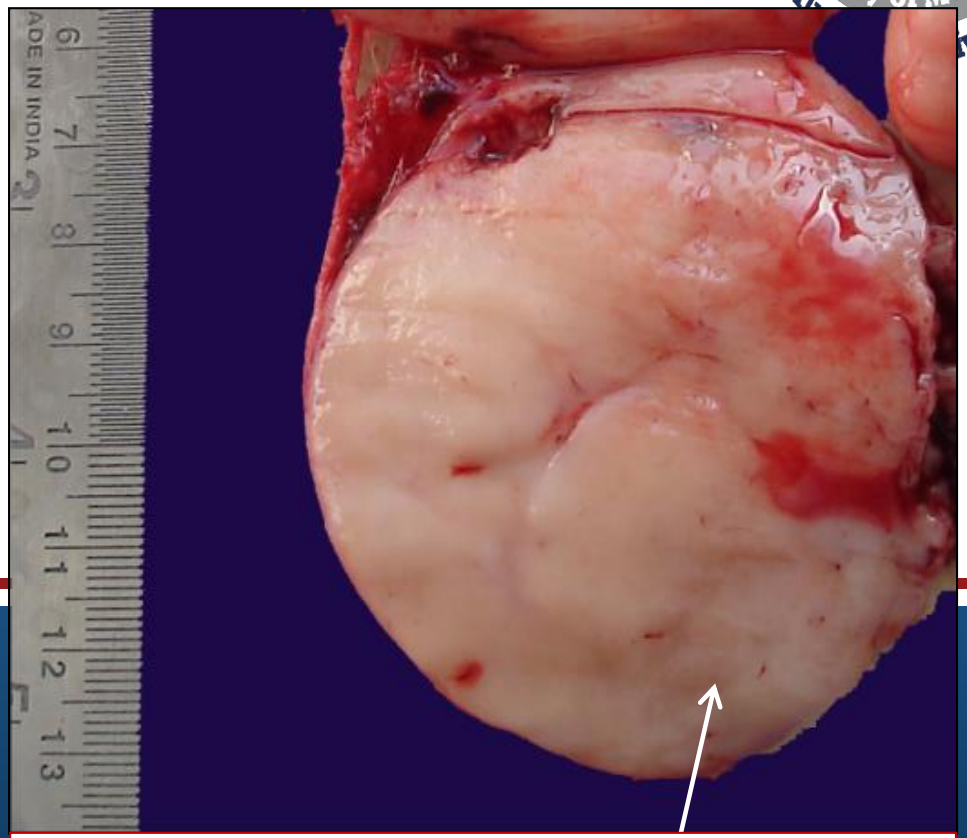

- Enlarged ,0.5- 3 cm , Matted
- Yellow white (caseation)

- Enlarged, 0.5- 3 cm ,Matted
- Yellow white (caseation)

# Hodgkin's Lymphoma

Enlarged ,Oval, Discrete (i.e. separate)

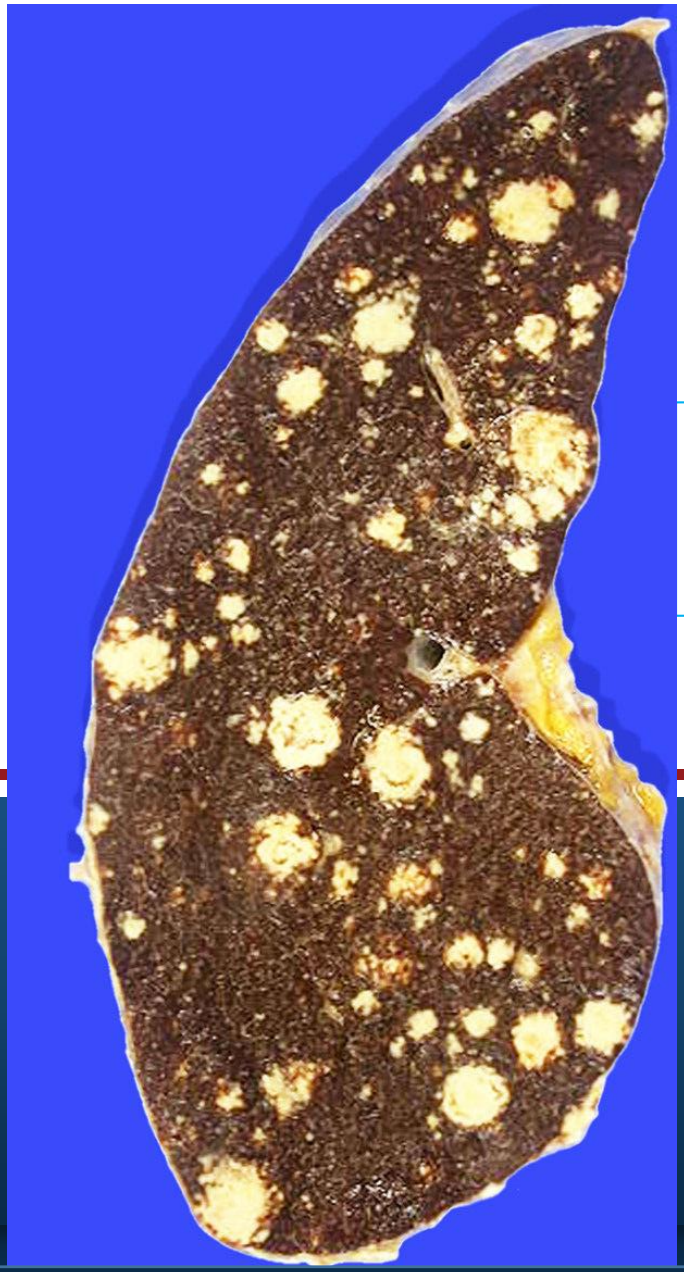

Homogenous , Pink , Rubbery Cut surface

# Miliary TB of Spleen

• **Tubercles ;** Small , Rounded , Greyish white

# Multiple tuberculomata of Spleen

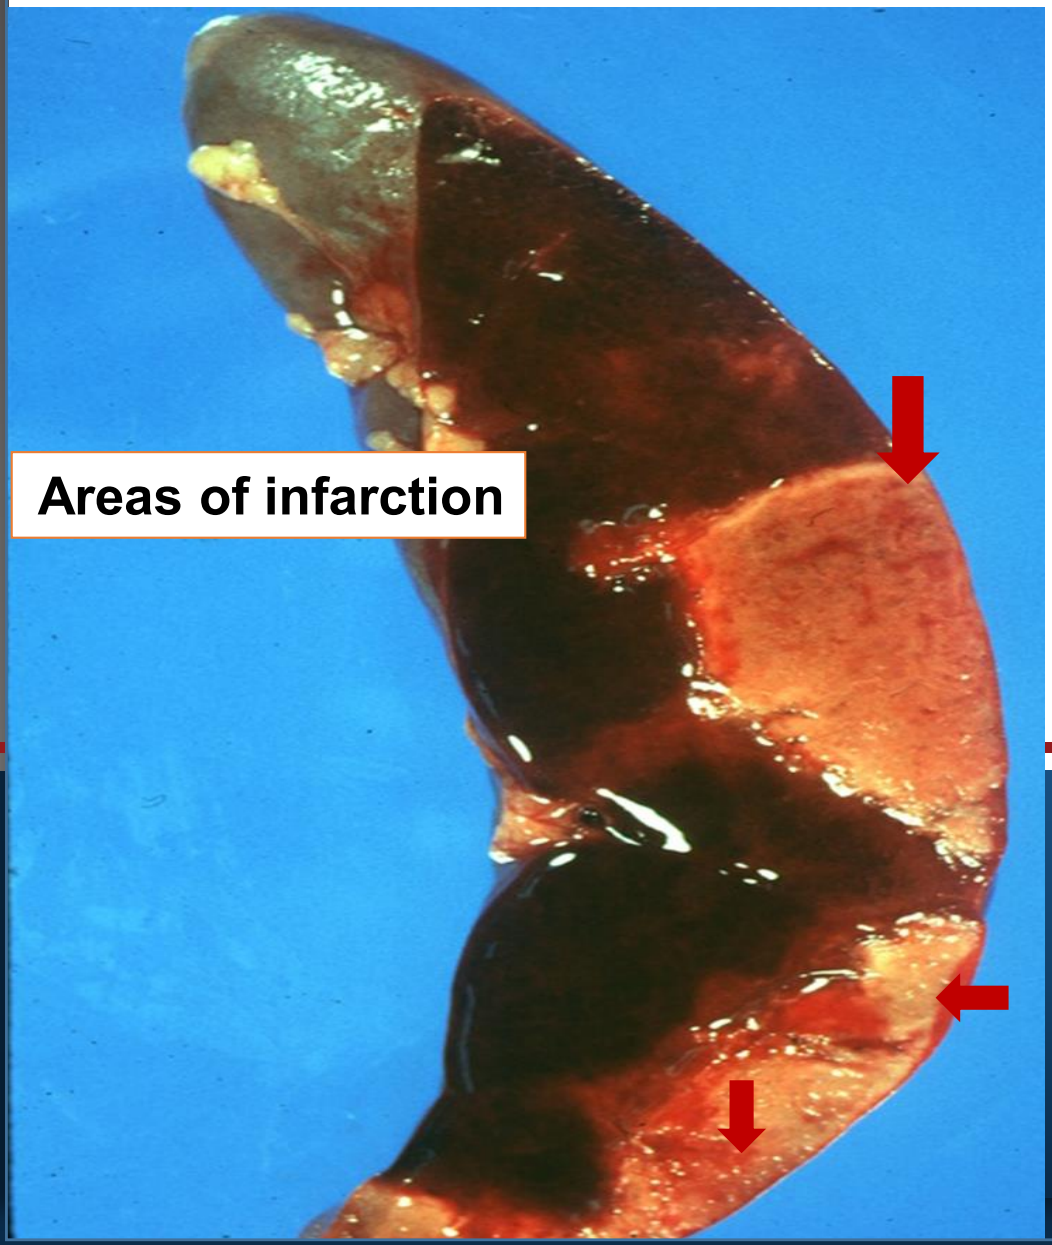

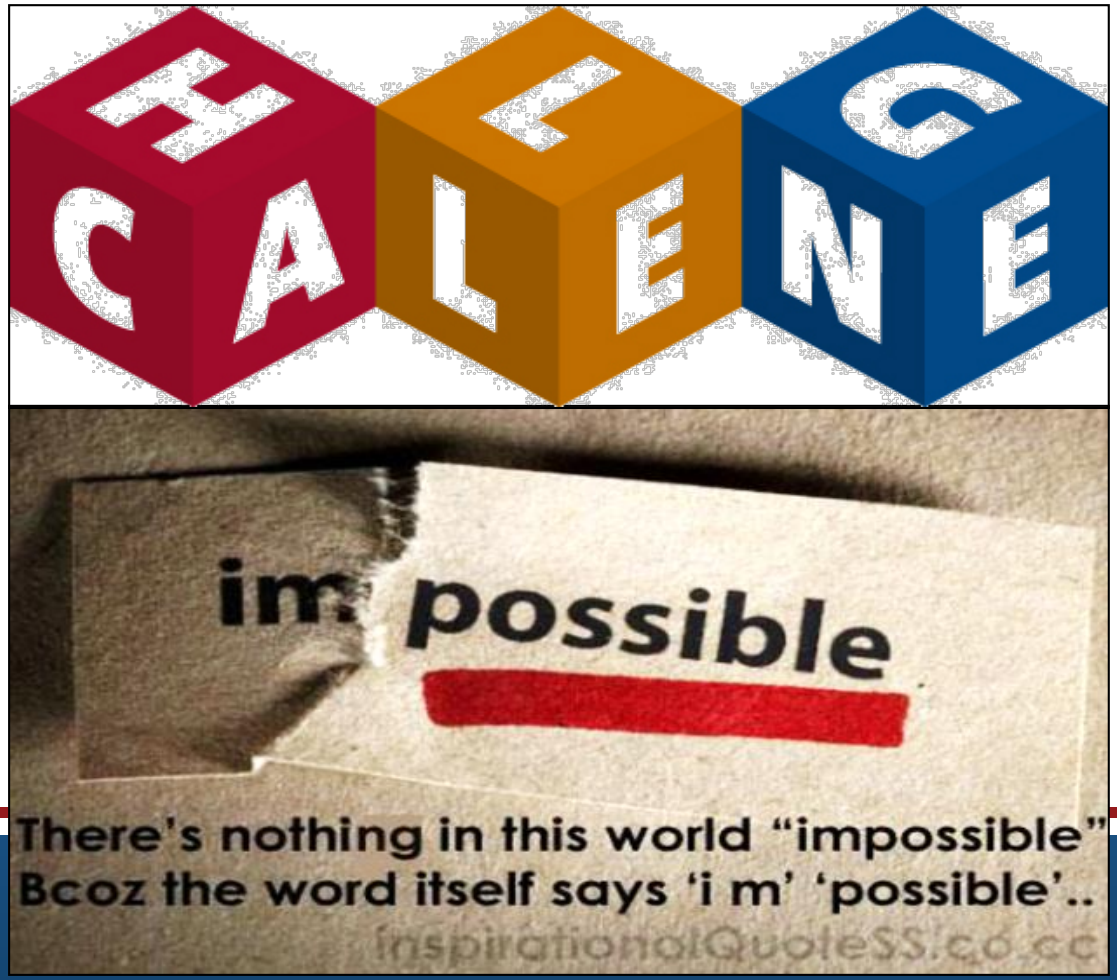

**Patches of Tuberculous reaction**
Variable size (0.5-2 cm) with
**Yellow cheesy cut surface**

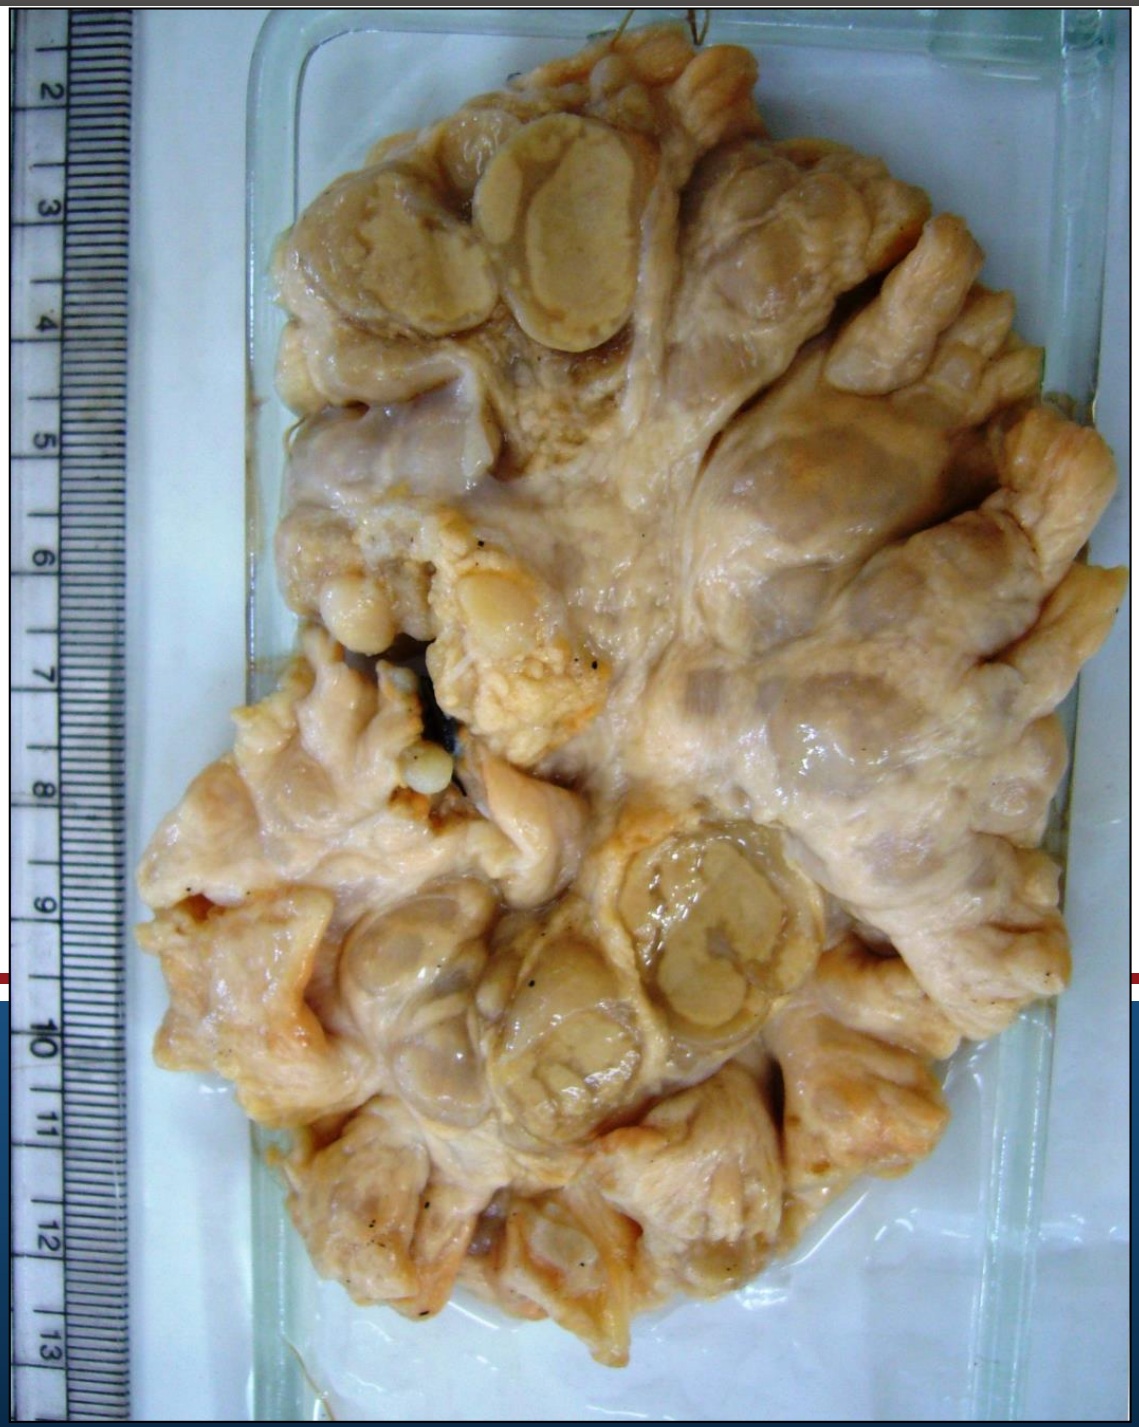

# Infarction Spleen

# Infarction Spleen

FELEG
im possible
There's nothing in this world "impossible"
Bcoz the word itself says 'i m' 'possible'..
