Second year practical Anatomy

Week 3

Spleen

On the provided specimens, plastic models or pictures, identify:

1. ***Position*** of spleen.
2. ***Borders:*** (superior and inferior).
3. ***Ends:*** (posterior and anterior).
4. ***Surfaces:*** (diaphragmatic and visceral).
5. ***Impressions*** on the visceral surface:
   a) The gastric impression.
   b) The renal impression.
   c) The colic impression.
   d) The pancreatic impression.
6. ***Hilum*** of the spleen: gives passage for the splenic vessels.

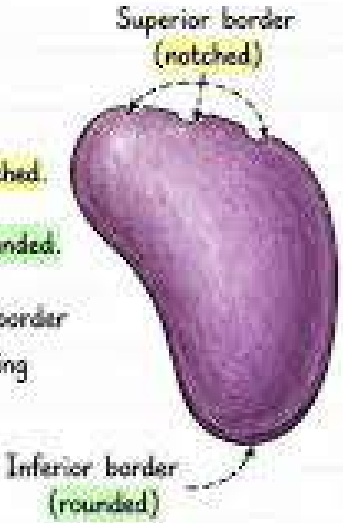

SPLEEN

Borders, Impressions, Relations & Peritoneal Attachments

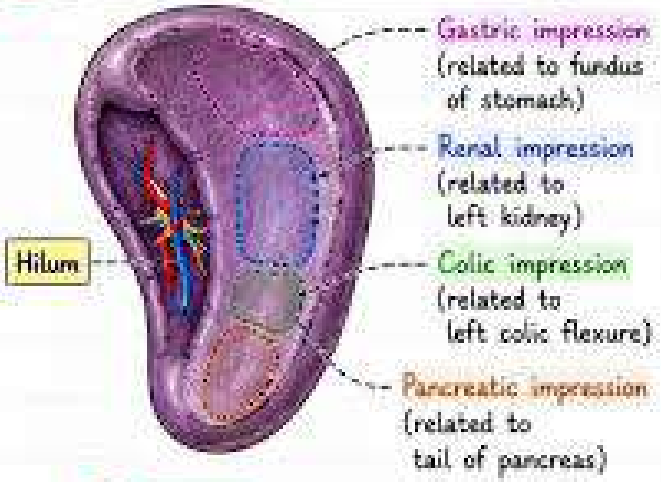

Key functions
- Filtration of blood
- Immune role
- RBC destruction
- Blood reservoir
- Hemopoiesis in fetus

1 BORDERS

- Superior border is characteristically notched.
- Inferior border is rounded.
- Notches on superior border help in palpation during splenomegaly.

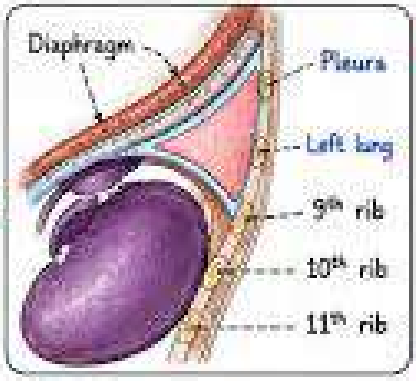

2 IMPRESSIONS ON VISCERAL SURFACE

3 RELATIONS

A. Diaphragmatic surface

- Related to diaphragm.
- Through diaphragm it is related to pleura, left lung and 9th–11th ribs.

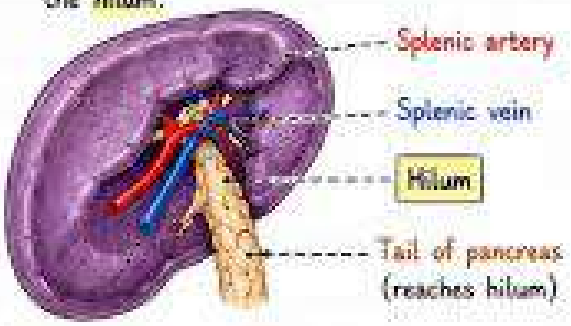

B. Visceral surface

- Related to stomach, left kidney, left colic flexure and tail of pancreas.

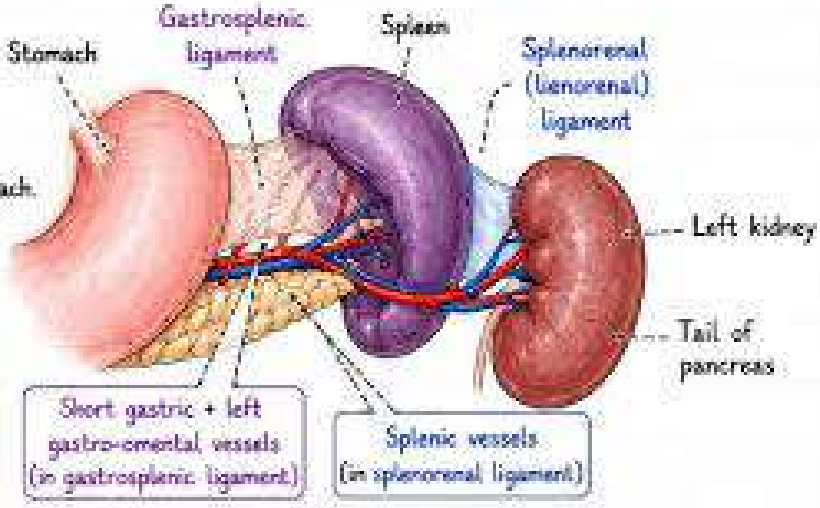

4 HILUM

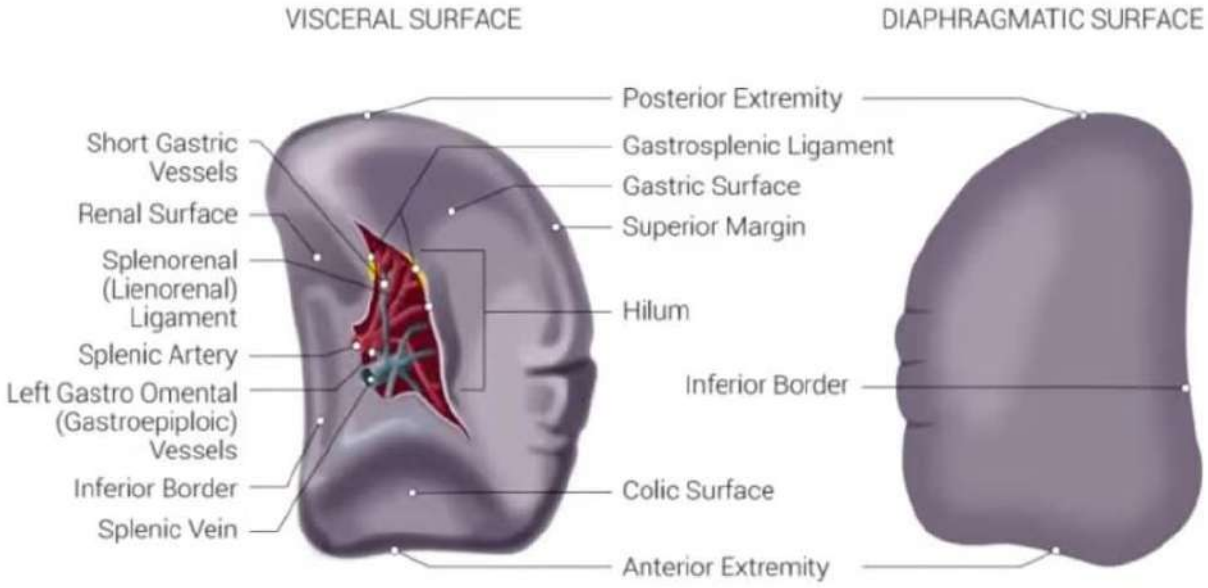

- Present on visceral surface.
- Transmits splenic vessels.
- Tail of pancreas reaches the hilum.

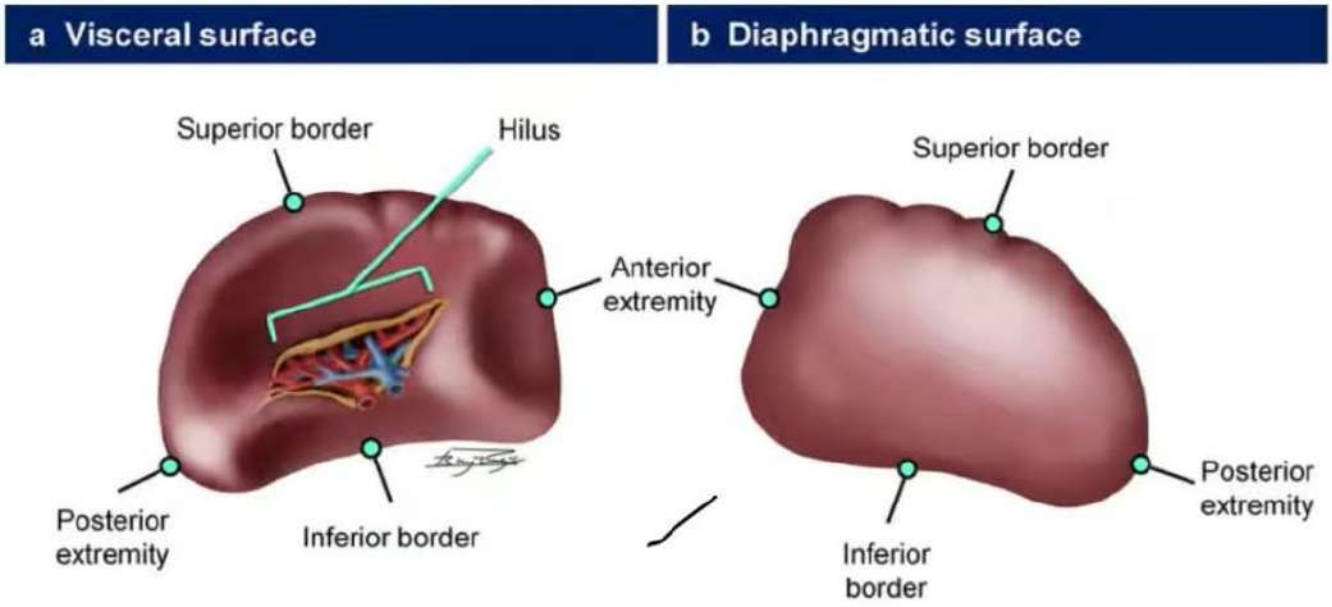

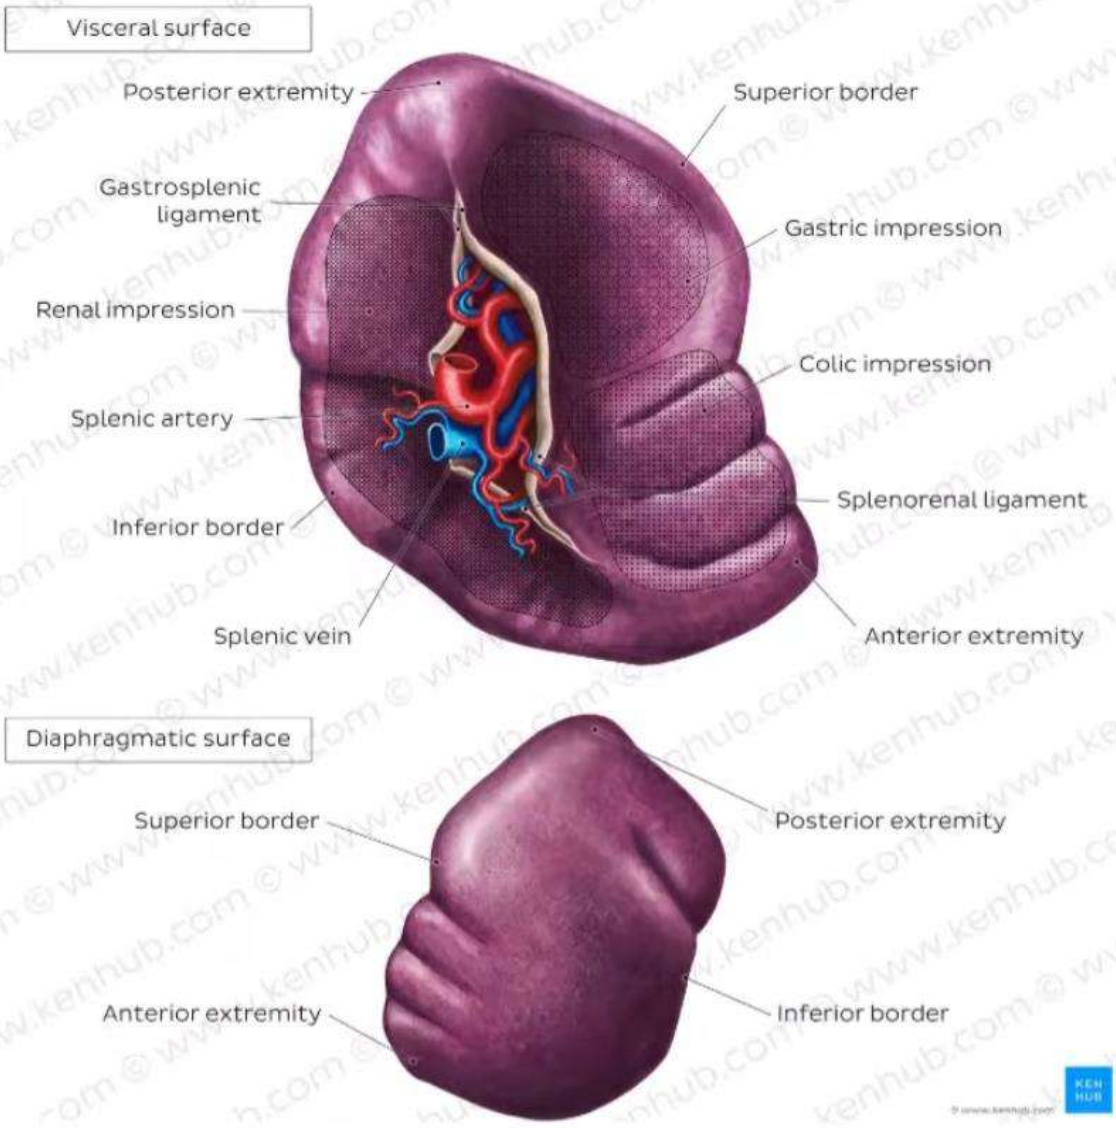

5 PERITONEAL ATTACHMENTS

- Spleen is intraperitoneal.
- Gastrosplenic ligament connects spleen to stomach.
- Splenorenal (lienorenal) ligament connects spleen to left kidney.
- Splenic vessels run in splenorenal ligament.
- Short gastric and left gastro-omental vessels run in gastrosplenic ligament.

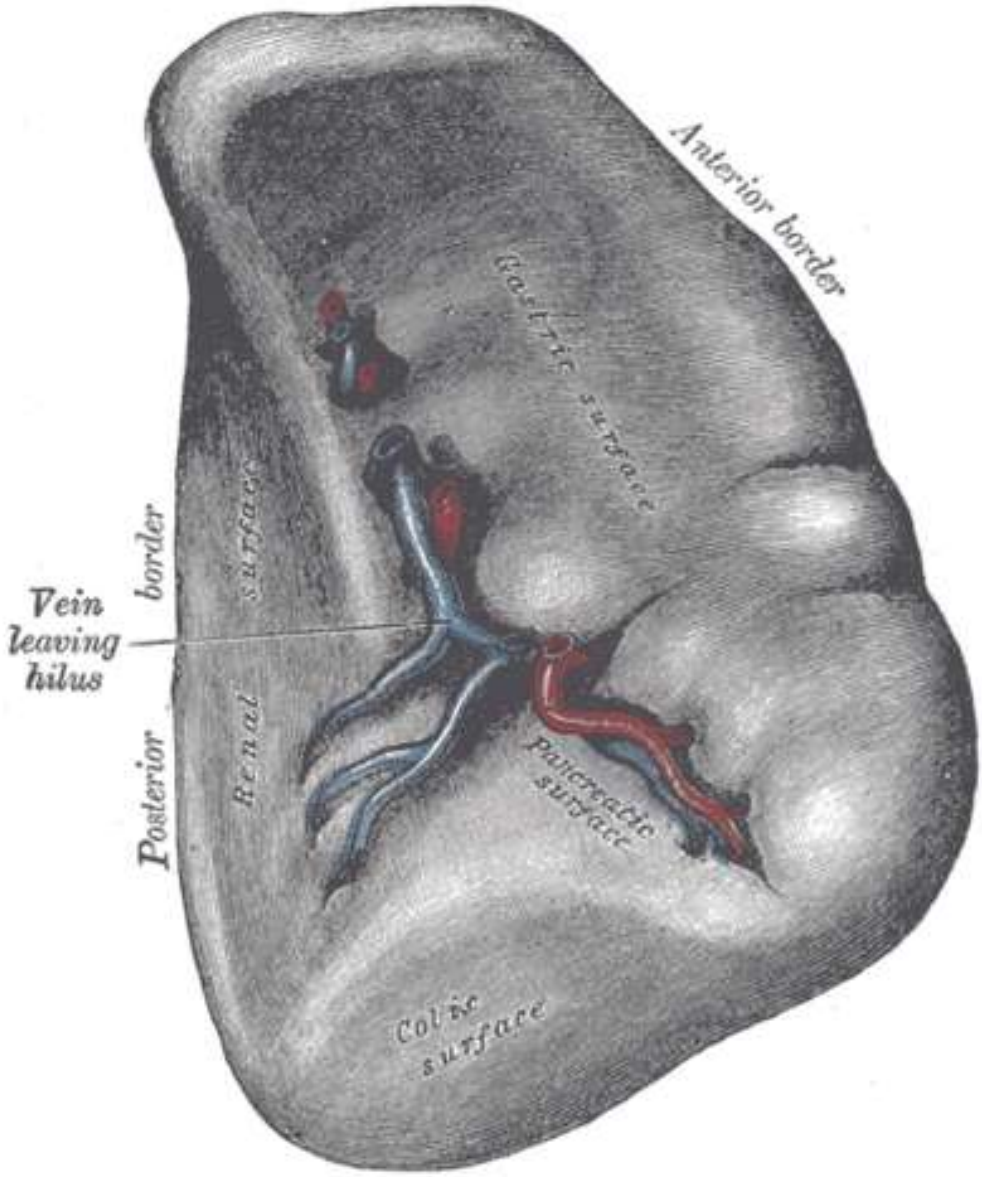

VISCERAL SURFACE
DIAPHRAGMATIC SURFACE
